

Probs 1, 2 Efficiency

Prob 2 Efficiency

Which tends to be more efficient?

BMI problem

- Probably better to compute as a float and then round to nearest integer
 - How would you do that?
- Most elegant if/else condition:

```

if bmi < 19:
    print "below"
elif bmi > 25:
    print "above"
else:
    print "in range"
  
```

Both are correct

Oct 9 2007 Sprenkle - CS111 3

As opposed to

```

if bmi >= 19 and bmi <= 25 :
    print "in range"
elif bmi > 25:
    print "above"
else:
    print "below"
  
```

Efficiency and Elegance

- Start thinking more about efficiency and elegance when writing programs
- Good variable names, good comments, good spacing
