

Objectives

- More on using strings
- Computer's representations of data types
- **str** methods

Feb 13, 2008

Sprenkle - CS111

1

Strings

- Actually a *sequence* of characters

➤ Example:

string = "The Beatles"

Feb 13, 2008

Sprenkle - CS111

2

Iterating Through a String

- For each character in the string

string of length 11

```
for char in string:
    print char
```

| | | | | | | | | | | |
|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| 'T' | 'h' | 'e' | ' ' | 'B' | 'e' | 'a' | 't' | 'l' | 'e' | 's' |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |

An integer

```
for pos in xrange(len(string)):
    print string[pos]
```

Index into the string

- For each position in the string

Feb 13, 2008

Sprenkle - CS111

3

Substrings Operator []

- Look at a particular character in the string

➤ Syntax: `str[<integer expression>]`

➤ [Positive values]: index of character

➤ [Negative values]: count backwards from end

- Look at a sequence of characters in the string

➤ Syntax: `str[<start>:<end>]`

Feb 13, 2008

Sprenkle - CS111

4

Testing for Substrings

- Using the **in** operator
 - Used **in** before in **for** loops
- Syntax:

substring **in** string

➤ Evaluates to True or False

- Example:

```
if "cat" in name:
    print name, "contains 'cat'"
```

Feb 13, 2008

Sprenkle - CS111

5

Representations of Data

- Computer needs ways to represent different types of data
 - Eventually, all boils down to 1s and 0s
- Computer needs to translate between what we know (**decimal**, **strings**) to what the computer knows (**binary**) and back again
- Seems like a divergence on strings but just wait...

Feb 13, 2008

Sprenkle - CS111

6

Decimal Representations

- Decimal is base 10
- Digits: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9
- Each *position* in a decimal number represents a power of 10

Feb 13, 2008

Sprenkle - CS111

7

Decimal Representations

- Decimal is base 10
- Digits: 0, 1, 2, 3, 4, 5, 6, 7, 8, 9
- Each *position* in a decimal number represents a power of 10
- Example: 54,087

| | | | | |
|--------|--------|--------|--------|--------|
| 5 | 4 | 0 | 8 | 7 |
| 10^4 | 10^3 | 10^2 | 10^1 | 10^0 |

- $= 5 \cdot 10^4 + 4 \cdot 10^3 + 0 \cdot 10^2 + 8 \cdot 10^1 + 7 \cdot 10^0$
- $= 5 \cdot 10,000 + 4 \cdot 1000 + 0 \cdot 100 + 8 \cdot 10 + 7 \cdot 1$

Feb 13, 2008

Sprenkle - CS111

8

Number Representations

| Characteristic | Decimal | Binary |
|---------------------|------------------------------|------------|
| Base | 10 | 2 |
| Digits | 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 | 0, 1 |
| Position represents | Power of 10 | Power of 2 |

- Binary: two values (0, 1)
 - Like a light switch (either **off** or **on**) or booleans (either True or False)
- 0 and 1 are *binary digits* or **bits**
 - 64-bit machine: represents numbers (and other data) with 64 bits

Feb 13, 2008

Sprenkle - CS111

9

Binary Representation

- Example: 1101

| | | | |
|-------|-------|-------|-------|
| 1 | 1 | 0 | 1 |
| 2^3 | 2^2 | 2^1 | 2^0 |

- $= 1 \cdot 2^3 + 1 \cdot 2^2 + 0 \cdot 2^1 + 1 \cdot 2^0$
- $= 1 \cdot 8 + 1 \cdot 4 + 0 \cdot 2 + 1 \cdot 1$
 - Decimal value: 13

- **Practice:** 10110

Feb 13, 2008

Sprenkle - CS111

10

Binary Representation

- Example: 10110

| | | | | |
|-------|-------|-------|-------|-------|
| 1 | 0 | 1 | 1 | 0 |
| 2^4 | 2^3 | 2^2 | 2^1 | 2^0 |

- $= 1 \cdot 2^4 + 0 \cdot 2^3 + 1 \cdot 2^2 + 1 \cdot 2^1 + 0 \cdot 2^0$
- $= 1 \cdot 16 + 0 \cdot 8 + 1 \cdot 4 + 1 \cdot 2 + 0 \cdot 1$
 - 22

Generalize this process into an algorithm...

Feb 13, 2008

Sprenkle - CS111

11

Algorithm: Converting Binary to Decimal

- **Accumulator design pattern**
- Read in the binary number as a string
 - The starting exponent will be the length of the string-1
- Initialize the result to zero
- For each bit in the binary number
 - Multiply the bit by the appropriate power of 2
 - Add this to the result
 - Reduce the exponent by 1
- Print the result

Implement algorithm
binaryToDecimal.py

Feb 13, 2008

Sprenkle - CS111

12

Algorithm: Converting Decimal to Binary

- Read in the decimal as an integer
- Initialize the result to the empty string
- Repeat until the decimal is 0:
 - `result = str(decimal % 2) + result`
 - `decimal = decimal / 2`
- Print the result

Try out algorithm with 22

Implement algorithm
`decimalToBinary.py`

Sprenkle - CS111

13

String Representations

- A **string** is a sequence of characters
- Each character is stored as a binary number
- **ASCII** (American Standard Code for Information Interchange) is one standard encoding for characters
 - One problem with ASCII is that it is based on the English language
 - Cannot represent other types of characters
- Unicode is a new standard

Feb 13, 2008

Sprenkle - CS111 [ASCII Table Handout](#)

14

ASCII Questions

- Lowercase letters are represented by what range of numbers?
- Uppercase letters are represented by what range of numbers?
- What is the difference between the decimal encoding of 'M' and 'N'?
 - Between 'm' and 'n'?

Feb 13, 2008

Sprenkle - CS111

15

ASCII Questions

- Lowercase letters are represented by what range of numbers?
 - 97--122
- Uppercase letters are represented by what range of numbers?
 - 65--90
- What is the difference between the decimal encoding of 'M' and 'N'?
 - Between 'm' and 'n'?
 - 1

Feb 13, 2008

Sprenkle - CS111

16

Translating to/from ASCII

- Translate a character into its ASCII numeric code using **ord**
 - `ord('a') ==> 97`
- Translate an ASCII numeric code into its character using **chr**
 - `chr(97) ==> 'a'`

`ascii_table.py`
`ascii.py`

Feb 13, 2008

Sprenkle - CS111

17

Encryption

- Process of encoding information to keep it secure
- One technique: Substitution Cipher
 - Each character in message is replaced by a new character

Feb 13, 2008

Sprenkle - CS111

18

Caesar Cipher

- Replace with a character X places away
 - X is your key
- Julius Caesar used it to communicate with his generals
- “Wrap around”
- Write program(s) to do this in lab

Feb 13, 2008

Sprenkle - CS111

19

Caesar Cipher

- Using the ASCII handout, what would be the encoded messages?

| Message | Key | Encoded Message |
|-----------------------------|-----|-----------------|
| apple | 5 | |
| zebra | 5 | |
| the eagle flies at midnight | -5 | |

Feb 13, 2008

Sprenkle - CS111

20

Caesar Cipher

- What is your algorithm for the encoding process?
- How would you decode an encrypted message?

| Message | Key | Encoded Message |
|-----------------------------|-----|------------------------------|
| apple | 5 | fuuqj |
| zebra | 5 | ejgwf |
| the eagle flies at midnight | -5 | ocz zvb gz agdzn vo hdyidbco |
