

Lab 10 Design

- 3 files: person.py, socialnetwork.py, facespace.py

Mar 30, 2010

Sprenkle - CSC1111

1

Goal Output

- You will create two graphs that look something like this and put them on a new web page for Lab 10

Mar 30, 2010

Sprenkle - CSC1111

2

Problem: People Files

- Given a people file that has the format

```

<num_users>
<user_id>
<name>
<network>
...
<user_id_n>
<name_n>
<network_n>
  
```

- Write algorithm to create Person objects to represent each person, add to SocialNetwork object

Mar 30, 2010

Sprenkle - CSC1111

3

Problem: Connection Files

- Given a connection file that has the format

```

<user_id> <user_id>
<user_id> <user_id>
...
<user_id> <user_id>
  
```

- Each line represents a friend/connection
 - > Symmetric relationship
 - > Each is a friend of the other
- Update SocialNetwork object

4

UI Specification

- Checks if user entered command-line argument
 - > Default files otherwise
- Read people, connections from files
- Repeatedly gets selected options from the user, until user quits
- Repeatedly prompts for new selection if invalid option
- Executes the appropriate code for the selection
- Stops when user quits
- Stores the social network into the file

Write pseudocode

5

UI Pseudocode

```

Use default files if only one command-line argument
Read people, connections from files
while True:
    display menu options
    prompt for selection
    while invalid option
        print error message
        prompt for selection
    break if selected quit
    otherwise, do selected option
Store social network to designated file
  
```

6

Implementation Plan

1. Implement Person class
 - Test (write test functions, e.g., `testPerson()`)
2. Implement SocialNetwork class
 - Example runs in lab write up
 - Note: Methods for classes will **not** prompt for input; Use **input parameters**
 - Test
3. Implement driver program

Mar 30, 2010

Sprenkle - CSCI111

7

Plan for Implementing a Class

- Write the constructor and string representation/print methods first
- Write function to test them
 - See `counter.py` and `card.py` for example test functions
- While more methods to implement ...
 - Write method
 - Test
 - REMINDER: methods should not be using input function but getting the input as parameters to the method

8

Writing Data To Dot File

- I will provide method that prints your social network to a file in a particular format (dot)
- Can display network graphically using **dot** program, e.g.,

Mar 30, 2010

Sprenkle - CSCI111

9

Using dot

- Syntax:
 - `dot -Tfiletype -o outputname dotfile`
- Examples:
 - `dot -Tpng -o graphs/network.png graphs/network.dot`
 - `dot -Tpdf -o graphs/network.pdf graphs/network.dot`

10

Export SocialNetwork to Files

- I provide method to write connections to a file
 - Because only want connection once
- You handle writing to people file
 - Must be in **same format** that you read in
 - Just "undoing" the read
- Good test: if you read in a people file, export it → should look the same
 - If you read in that exported file, should see **same social network**

Sprenkle - CSCI111

11

Test Data

- SocialNetwork requires: People file, Connections file
- Social Networks:
 - Simple
 - Hollywood
 - Randomly generated files
 - From W&L first and last names, randomly combined, connected
- Could combine different ones

12

Notes

- Advice:
 - Read through entire lab to see where you are going
- A Person's *network* is different from the SocialNetwork
 - Person's network is just a string
 - Will do more with that later...
- Can have people in different networks in the same SocialNetwork
