

Objectives

- Review Lab
- Introduction to
 - Problem solving
 - Programming languages
 - Writing Python programs

Jan 12, 2011

Sprengle - CSCI 111

1

Review: Lab

- Learned some UNIX commands
- Created a Web page
- Started writing Python programs
- Lessons learned:
 - Sometimes, need to read further in the directions
 - Problems are fixable (often just typos!)
 - Find a good solution

Jan 12, 2011

Sprengle - CSCI 111

2

Review: UNIX

- UNIX is a bad parent
 - Doesn't tell you when you've done something right
 - Only tells you when you've done something wrong

Terminal:

```
sprengle@spartacus Desktop$ mv lab00.ppt.pdf lab00.pdf
sprengle@spartacus Desktop$
```

CORRECT! Because didn't get an error message!

Jan 12, 2011

Sprengle - CSCI 111

3

Review: Linux

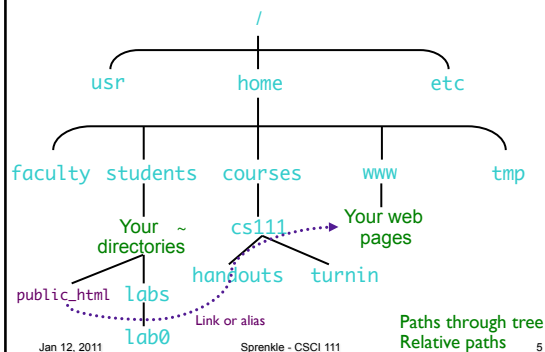

- How do you ...
 - Learn more about a Linux command?
 - List the files in a directory?
 - Change your current directory?
 - Make a directory?
 - Find out the current directory?
- What is the shortcut for ...
 - The current directory?
 - The parent directory?
 - Your home directory?

Jan 12, 2011

Sprengle - CSCI 111

4

Review: Linux File Structure

Jan 12, 2011

Sprengle - CSCI 111

5

Relative Paths vs Absolute Paths

- Given that you're at WLU, how would you get to Washington Hall? To Roanoke? To Baltimore?

Jan 12, 2011

Sprengle - CSCI 111

6

Relative Paths vs Absolute Paths

- Given that you're in **China**, how would you go to Canada? WLU? Washington Hall?

Jan 12, 2011

Sprengle - CSCI 111

7

Computational Problem Solving 101

- Computational Problem:**
A problem that can be solved by logic
- To solve the problem:
 - Create a **model** of the problem
 - Design an **algorithm** for solving the problem using the model
 - Write a **program** that implements the algorithm

Jan 12, 2011

Sprengle - CSCI 111

8

Computational Problem Solving 101

- Algorithm:** a well-defined recipe for solving a problem
 - Has a finite number of steps
 - Completes in a finite amount of time
- Program**
 - An algorithm written in a **programming language**
 - Also called code
- Application**
 - Large programs, solving many problems

Jan 12, 2011

Sprengle - CSCI 111

9

Algorithms: Input and Output

- Algorithms often have a defined **input** and **output**
- Correct** algorithms give the intended output for a set of input
- Example: Multiply by 10
 - I/O for a correct algorithm:
- More examples: averaging numbers, recipes

| Input | Output |
|-------|--------|
| 5 | 50 |
| .32 | 3.2 |
| x | 10x |

10

Making a Peanut Butter & Jelly Sandwich

- How do you make a peanut butter and jelly sandwich?
- Write down the steps so that someone else can follow your instructions
 - Make no assumptions about the person's knowledge of PB&J sandwiches
 - The person has the following materials:
 - Loaf of bread, Jar of PB, Jar of Jelly
 - 2 Knives, paper plates, napkins

Jan 12, 2011

Sprengle - CSCI 111

11

Discussion of PB&J

- The computer: a blessing and a curse
 - Recognize and meet the challenge!
- Be unambiguous, descriptive
 - Must be clear for the computer to understand
 - "Do what I **meant**! Not what I said!"
 - Motivates programming languages
- Creating/Implementing an algorithm
 - Break down pieces
 - Try it out
 - Revise

Jan 12, 2011

Sprengle - CSCI 111

12

Discussion of PB&J

- Steps need to be done in particular order
- Be prepared for special cases
 - Any other special cases we didn't discuss?
- Aren't necessarily spares in real life
 - Need to write correct algorithms!
- Reusing similar techniques
 - Do the same thing with a little twist
- Looping
 - For repeating the same action

Jan 12, 2011

Sprenkle - CSCI 111

13

Parts of an Algorithm

- Input, Output
- Primitive operations
 - What data you have, what you can do to the data
- Naming
 - Identify things we're using
- Sequence of operations
- Conditionals
 - Handle special cases
- Repetition/Loops
- Subroutines
 - Call, reuse similar techniques

An overview for the semester!

Jan 12, 2011

Sprenkle - CSCI 111

14

Other Lessons To Remember

- A cowboy's wisdom: Good judgment comes from experience
 - How can you get experience?
 - Bad judgment works every time
- Program errors can have **bad** effects
 - Prevent the bad effects--especially before you turn in your assignment!

Jan 12, 2011

Sprenkle - CSCI 111

15

Computational Problem Solving 101

- **Computational Problem:**
A problem that can be solved by logic
- To solve the problem:
 - Create a **model** of the problem
 - Design an **algorithm** for solving the problem using the model
 - ➔ Write a **program** that *implements* the algorithm

Jan 12, 2011

16

Why Do We Need Programming Languages?

<http://www.tiobe.com/index.php/content/paperinfo/tpci/index.html>

- Computers can't understand English
 - Too ambiguous
- Humans can't easily write machine code

Live Jazz!

Jan 11, 2011

Sprenkle - CSCI 111

17

Why Do We Need Programming Languages?

- Computers can't understand English
 - Too ambiguous
- Humans can't easily write machine code

Jan 12, 2011

Sprenkle - CSCI 111

18

Why Do We Need Programming Languages?

- Computers can't understand English
 - Too ambiguous
- Humans can't easily write machine code

Jan 12, 2011

Sprenkle - CSCI 111

19

Programming Languages

- Programming language:
 - Specific rules for what is and isn't allowed
 - Must be exact
 - Computer carries out commands as they are given
- **Syntax**: the symbols given
- **Semantics**: what it means
- Example: III * IV means 3×4 which evaluates to 12
- Programming languages are unambiguous

Jan 12, 2011

Sprenkle - CSCI 111

20

Python Interpreter

1. Validates Python programming language expression(s)
 - Enforces Python **syntax**
 - Reports **syntax** errors
2. Executes expression(s)
 - Runtime errors (e.g., divide by 0)
 - **Semantic** errors (not what you *meant*)

Jan 12, 2011

Sprenkle - CSCI 111

21

Parts of an Algorithm

- ➔ Input, **Output**
- Primitive operations
 - What data you have, what you can do to the data
- Naming
 - Identify things we're using
- **Sequence** of operations
- Conditionals
 - Handle special cases
- Repetition/Loops
- Subroutines
 - Call, reuse similar techniques

Jan 12, 2011

Sprenkle - CSCI 111

22

Printing Output

- **print** is a special command
 - Displays the result of expression(s) to the terminal
- `print "Hello, class"`
 - string literal
 - print** automatically adds a '\n' (carriage return) after it's printed

Jan 12, 2011

Sprenkle - CSCI 111

23

Printing Output

- **print** is a special command
 - Displays the result of expression(s) to the terminal
- `print "Hello, class"`
 - string literal
 - print** automatically adds a '\n' (carriage return) after it's printed
- `print "Your answer is", 4*4`
 - Displays same as:
 - `print "Your answer is",`
 - `print 4*4`
 - Syntax**: comma
 - Semantics**: print multiple "things" in one line

Sprenkle - CSCI 111

24

Next Time

- More programming fundamentals
- Broader Issue: **“New Programs Aim to Lure Young Into Digital Jobs”**
 - Post write up on Sakai, as response to appropriate topic
 - Your write up will include
 - How interesting you found this article on a scale of 0 to 9
 - Summary of the 3 most important points
 - Article's effect on your understanding of CS
 - Article's relation to our course specifically (if applicable)
 - Question for class discussion
 - See Course's CS Issues page for more information
