## Review

- What does “polynomial time reducible” mean?
  - What is it relating?
- What is a way of showing that one algorithm is polynomial time reducible to another?

## Review: Polynomial-Time Reduction

Suppose we could solve  $Y$  in polynomial-time.  
What else could we solve in polynomial time?

- **Reduction.** Problem  $X$  *polynomially reduces to* problem  $Y$  if arbitrary instances of problem  $X$  can be solved using:
  - Polynomial number of standard computational steps, *plus*
  - Polynomial number of calls to **oracle** that solves problem  $Y$ 
    - Assume have a black box that can solve  $Y$
- **Notation:**  $X \leq_p Y$ 
  - “ $X$  is polynomial-time reducible to  $Y$ ”
- **Conclusion:** If  $Y$  can be solved in polynomial time and  $X \leq_p Y$ , then  $X$  can be solved in polynomial time.

For  $X$ 

+

 $Y$

## Review: Polynomial-Time Reduction

- **Purpose.** Classify problems according to *relative difficulty*.
- **Design algorithms.** If  $X \leq_p Y$  and  $Y$  can be solved in polynomial-time, then  $X$  **can** also be solved in polynomial time.
- **Establish intractability.** If  $X \leq_p Y$  and  $X$  cannot be solved in polynomial-time, then  $Y$  **cannot** be solved in polynomial time.
- **Establish equivalence.** If  $X \leq_p Y$  and  $Y \leq_p X$ , we use notation  $X \equiv_p Y$ .

## Status of the P vs NP Problem

### From Numbers

Charlie: Dad, uhm... I've been working on a problem. P vs. NP. It can't be solved.

Alan: I think you knew that when you started.

Charlie: I could work on it forever. Constantly pushing forward, still never reaching an end.

...

6

## Status of the P vs NP Problem

- What is P? NP? What is the problem?
- What is a common feature of NP?

Apr 8, 2011

Sprenkle - CSCI211

7

## NP

- Problems that no polytime algorithm has been found AND have not proven that no polytime algorithm exists
  - A little more ...

### Examples:

Name	Description
<b>Hamiltonian circuit</b>	Determine whether a given graph has a Hamiltonian circuit (a path that starts & ends at the same vertex and passes through all other vertices exactly once)
<b>Traveling salesman</b>	Find the shortest tour through n cities with known positive integer distances between them (each city once)
<b>Graph coloring</b>	Find a graph's chromatic number: smallest # of colors that need to be assigned to the graph's vertices so that no 2 adjacent vertices are assigned the same color.

8

## Common Feature

- Computationally difficult BUT checking if a proposed solution solves problem *can* be solved in polynomial time
- Example: easy to check if a proposed list of vertices is a Hamiltonian circuit for a given graph with n vertices

Apr 8, 2011

Sprenkle - CSCI211

9

## Nondeterministic Algorithm

- Input: instance of a decision problem
  1. Nondeterministic "guessing" stage: guess a solution to problem I
  2. Deterministic "verification" stage: outputs yes if solution is a solution to the problem

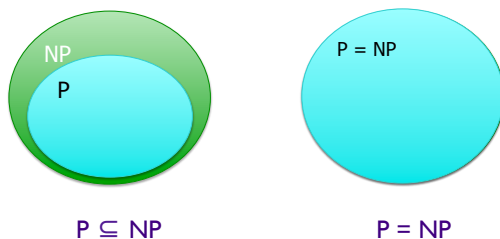

**NP:** A nondeterministic algorithm whose verification stage has a polynomial runtime.

## What We're Trying To Figure Out

Apr 8, 2011

Sprenkle - CSCI211

11

## Status of the P vs NP Problem

- What are the consequences of NP Completeness?
- What if  $P = NP$ ?
- How have people tried to prove  $P \neq NP$ ?
  - Limitations? Still in progress?

## Final

- Usual rules
- Due next Friday, 5 p.m. (end of exams)
- Can use book, notes, handouts, my lecture notes, me (limited)
- No outside resources
