

Objectives

- Data structure: Graphs
- Graph Connectivity, Traversal

Jan 23, 2012

CSCI211 - Sprenkle

1

Notes

- Journals
 - A little easier on the grading this time
 - Overall looked good, good reminders for later
 - Good questions
 - Looking for a little more on the important info
 - Better reminders for later
 - Maybe: page #s of algorithms, proofs
 - Organization
 - Make a sidebar
 - Break into multiple pages, use the headings

Jan 23, 2012

CSCI211 - Sprenkle

2

Graph Representation: Adjacency Matrix

- $n \times n$ matrix with $A_{uv} = 1$ if (u, v) is an edge
 - Two representations of each edge (symmetric matrix)
 - Space?
 - Checking if (u, v) is an edge?
 - Identifying all edges?

	1	2	3	4	5	6	7	8
1	0	1	1	0	0	0	0	0
2	1	0	1	1	1	0	0	0
3	1	1	0	0	1	0	1	1
4	0	1	0	1	1	0	0	0
5	0	1	1	1	0	1	0	0
6	0	0	0	0	1	0	0	0
7	0	0	1	0	0	0	0	1
8	0	0	1	0	0	0	1	0

Jan 23, 2012

CSCI211 - Sprenkle

3

Graph Representation: Adjacency Matrix

- $n \times n$ matrix with $A_{uv} = 1$ if (u, v) is an edge
 - Two representations of each edge (symmetric matrix)
 - Space: $\Theta(n^2)$
 - Checking if (u, v) is an edge: $\Theta(1)$ time
 - Identifying all edges: $\Theta(n^2)$ time

	1	2	3	4	5	6	7	8
1	0	1	1	0	0	0	0	0
2	1	0	1	1	1	0	0	0
3	1	1	0	0	1	0	1	1
4	0	1	0	1	1	0	0	0
5	0	1	1	1	0	1	0	0
6	0	0	0	0	1	0	0	0
7	0	0	1	0	0	0	0	1
8	0	0	1	0	0	0	1	0

Jan 23, 2012

CSCI211 - Sprenkle

4

Graph Representation: Adjacency List

- Node indexed array of lists
 - Two representations of each edge
 - Space? ← What are the extremes?
 - Checking if (u, v) is an edge?
 - Identifying all edges?

Jan 23, 2012

CSCI211 - Sprenkle

5

Graph Representation: Adjacency List

- Node indexed array of lists
 - Two representations of each edge
 - Space = $2m + n = O(m + n)$
 - Checking if (u, v) is an edge takes $O(\deg(u))$ time
 - Identifying all edges takes $\Theta(m + n)$ time

degree = number of
neighbors of u

Tend to
represent this way

Jan 23, 2012

CSCI211 - Sprenkle

6

Paths and Connectivity

- **Def.** A **path** in an undirected graph $G = (V, E)$ is a sequence P of nodes $v_1, v_2, \dots, v_{k-1}, v_k$
 - Each consecutive pair v_i, v_{i+1} is joined by an edge in E
- **Def.** A path is **simple** if all nodes are *distinct*
- **Def.** An undirected graph is **connected** if \forall pair of nodes u and v , there is a path between u and v

• Short path
• Distance

Jan 23, 2012

7

Cycles

- **Def.** A **cycle** is a path $v_1, v_2, \dots, v_{k-1}, v_k$ in which $v_1 = v_k$, $k > 2$, and the first $k-1$ nodes are all distinct

cycle $C = 1-2-4-5-3-1$

Jan 23, 2012

CSCI211 - Sprenkle

8

TREES

Jan 23, 2012

CSCI211 - Sprenkle

9

Trees

- **Def.** An undirected graph is a **tree** if it is connected and does not contain a cycle
- Simplest connected graph
 - Deleting any edge from a tree will disconnect it

Jan 23, 2012

CSCI211 - Sprenkle

10

Trees

- **Theorem.** Let G be an undirected graph on n nodes. Any two of the following statements imply the third:
 - G is connected
 - G does not contain a cycle
 - G has $n-1$ edges

Jan 23, 2012

CSCI211 - Sprenkle

11

Rooted Trees

- Given a tree T , choose a root node r and orient each edge away from r
- Models hierarchical structure

a tree

the same tree, rooted at 1

Why $n-1$ edges?

Jan 23, 2012

12

Rooted Trees

- Why $n-1$ edges?
 - Each non-root node has an edge to its parent

Jan 23, 2012

CSCI211 - Sprenkle

13

Trees

- Theorem.** Let G be an undirected graph on n nodes. Any two of the following statements imply the third:
 - G is connected
 - G does not contain a cycle
 - G has $n-1$ edges

Jan 23, 2012

CSCI211 - Sprenkle

14

Phylogeny Trees

- Describe evolutionary history of species
 - mammals and birds share a common ancestor that they do not share with other species
 - all animals are descended from an ancestor not shared with mushrooms, trees, and bacteria

Tiffani Williams, Texas A&M
Computational Biology

CSCI211 - Sprenkle

15

GUI Containment Hierarchy

- Describe organization of GUI widgets

Jan 23, 2012

CSCI211 - Sprenkle

16

GRAPH CONNECTIVITY & TRAVERSAL

Jan 23, 2012

CSCI211 - Sprenkle

17

Connectivity

- s-t connectivity problem.** Given nodes s and t , is there a path between s and t ?
- s-t shortest path problem.** Given nodes s and t , what is the length of the shortest path between s and t ?
- Applications
 - Facebook
 - Maze traversal
 - Kevin Bacon number
 - Fewest number of hops in a communication network

Jan 23, 2012

CSCI211 - Sprenkle

18

Application: Connected Component

- Find all nodes **reachable** from s

- Connected component containing node 1 is $\{1, 2, 3, 4, 5, 6, 7, 8\}$

Jan 23, 2012

CSCI211 - Sprenkle

19

Application: Flood Fill

- Given lime green pixel in an image, change color of entire blob of neighboring lime pixels to blue
 - Node: pixel
 - Edge: two neighboring lime pixels
 - Blob: connected component of lime pixels

Jan 23, 2012

20

Application: Flood Fill

- Given lime green pixel in an image, change color of entire blob of neighboring lime pixels to blue
 - Node: pixel
 - Edge: two neighboring lime pixels
 - Blob: connected component of lime pixels

22

A General Algorithm

```
R will consist of nodes to which s has a path
R = {s}
while there is an edge (u,v) where u ∈ R and v ∉ R
  add v to R
```

- R will be the **connected component** containing s
- Algorithm is underspecified

In what order should we consider the edges?

Jan 23, 2012

CSCI211 - Sprenkle

23

Breadth-First Search

- Intuition.** Explore outward from s in all possible directions (edges), adding nodes one "layer" at a time

- Algorithm**

- $L_0 = \{s\}$
- L_1 = all neighbors of L_0
- L_2 = all nodes that have an edge to a node in L_1 and do not belong to L_0 or L_1
- L_{i+1} = all nodes that have an edge to a node in L_i and do not belong to an earlier layer

Jan 23, 2012

CSCI211 - Sprenkle

24

Run BFS on This Graph

$s = 1$

Jan 23, 2012

CSCI211 - Sprenkle

25

Example of Breadth-First Search

$s = 1$

Creates a tree

-- is a node in the graph that is not in the tree

Jan 23, 2012

CSCI211 - Sprenkle

26

Breadth-First Search

- **Theorem.** For each i , L_i consists of all nodes at distance exactly i from s . *There is a path from s to t iff t appears in some layer.*

- What does this theorem mean?
- Can we determine the distance between s and t ?

Jan 23, 2012

CSCI211 - Sprenkle

27

Breadth-First Search

- **Theorem.** For each i , L_i consists of all nodes at distance exactly i from s . There is a path from s to t iff t appears in some layer.
 - Shortest path to t from s , is the i from L_i
 - All nodes **reachable** from s are in L_1, L_2, \dots, L_{n-1}

Jan 23, 2012

CSCI211 - Sprenkle

28

Breadth-First Search

- **Property.** Let T be a BFS tree of $G = (V, E)$, and let (x, y) be an edge of G . Then the level of x and y *differ* by *at most* 1.

G:

If x is in L_i ,
then y must be in L_{i+1} or earlier

Jan 23, 2012

CSCI211 - Sprenkle

29

Connected Component: BFS

- Find all nodes **reachable** from s

In general....

```
R will consist of nodes to which s has a path
R = {s}
while there is an edge (u,v) where u ∈ R and v ∉ R
  add v to R
```

In what order does BFS consider edges?

Jan 23, 2012

CSCI211 - Sprenkle

30

Connected Component: BFS vs DFS

- Find all nodes **reachable** from s

In general....

```
R will consist of nodes to which  $s$  has a path
R = { $s$ }
while there is an edge  $(u,v)$  where  $u \in R$  and  $v \notin R$ 
  add  $v$  to R
```

- Theorem.** Upon termination, R is the connected component containing s
 - BFS = explore in order of distance from s
 - DFS = explore until hit "deadend"

Jan 23, 2012

CSCI211 - Sprenkle

31 31

Depth-First Search

- Need to keep track of where you've been
- When reach a "dead-end" (already explored all neighbors), backtrack to node with unexplored neighbor
- Algorithm:**

```
DFS( $u$ ):
  Mark  $u$  as "Explored" and add  $u$  to  $R$ 
  For each edge  $(u, v)$  incident to  $u$ 
    If  $v$  is not marked "Explored" then
      DFS( $v$ )
```

Jan 23, 2012

CSCI211 - Sprenkle

32 32

Depth-First Search

- How does DFS work on this graph?
 - Starting from node 1

Jan 23, 2012

CSCI211 - Sprenkle

33 33

DFS vs BFS

- Compare the resulting trees
