

Objectives

- Wrap up: Implementing a PQ
- Data structure: Graphs

Jan 21, 2013

CSCI211 - Sprenkle

1

Notes

- Journals
 - Maybe: page #s of algorithms, proofs
 - Still provide intuition, runtime
- Problem Set
 - Recommend typing because have electronic copy later (e.g., during take-home exam)

Jan 21, 2013

CSCI211 - Sprenkle

2

Review

- What is a priority queue?
- What is a heap?
 - Properties
 - Implementation
- What is the process for finding the smallest element in a heap?
- What is the process for adding to a heap?

Jan 21, 2013

CSCI211 - Sprenkle

3

Review: Heap Defined

- Combines benefits of sorted array and list
- Balanced binary tree

Note: **not** a binary search tree

Jan 21, 2013

CSCI211 - Sprenkle

4

Review: Implementing a Heap

- Option 1: Use pointers
 - Each node keeps
 - Element it stores (key)
 - 3 pointers: 2 children, parent
- Option 2: No pointers
 - Requires knowing upper bound on n
 - For node at position i
 - left child is at $2i$
 - right child is at $2i+1$

Jan 21, 2013

CSCI211 - Sprenkle

5

Review: Implementing a Heap

- Finding the minimal element
 - First element
 - $O(1)$

Jan 21, 2013

CSCI211 - Sprenkle

6

Review: Heapi fy-Up

Heap Position where node added

```

Heapi fy-up(H, i):
  if i > 1 then
    j=parent(i)=floor(i/2)
    if key[H[i]] < key[H[j]] then
      swap array entries H[i] and H[j]
      Heapi fy-up(H, j)
  
```

- Why does this algorithm work?
- What is the intuition?

Jan 21, 2013

CSCI211 - Sprenkle

7

Heapi fy-Up

- **Claim.** Assuming array H is almost a heap with key of $H[i]$ too small, Heapi fy-Up fixes the heap property in $O(\log i)$ time
 - Can insert a new element in a heap of n elements in $O(\log n)$ time

Jan 21, 2013

CSCI211 - Sprenkle

8

Heapi fy-Up

- **Claim.** Assuming array H is almost a heap with key of $H[i]$ too small, Heapi fy-Up fixes the heap property in $O(\log i)$ time
 - Can insert a new element in a heap of n elements in $O(\log n)$ time
- **Proof.** By induction
 - If $i=1$, is already a heap $\rightarrow O(1)$
 - If $i>1$,
 - Swaps are $O(1)$
 - Swaps continue up to root (max) $\rightarrow \log i$

Jan 21, 2013

CSCI211 - Sprenkle

9

Deleting an Element

Jan 21, 2013

CSCI211 - Sprenkle

10

Deleting an Element

- Delete at position i
- Removing an element:
 - Messes up heap order
 - Leaves a "hole" in the heap
- Not as straightforward as Heapi fy-Up
- Algorithm
 1. Fill in element where hole was
 - Patch hole: move n^{th} element into i^{th} spot
 2. Adjust heap to be in order
 - At position i because moved n^{th} item up to i

Jan 21, 2013

CSCI211 - Sprenkle

11

Deleting an Element

- What are the possibilities when we move n^{th} element (w) into spot where element was removed?

Jan 21, 2013

CSCI211 - Sprenkle

12

Deleting an Element

Example of OK:
11 deleted, replaced by 16

- Two “bad” possibilities: element w is
 - Too small: violation is between it and parent \rightarrow Heapify-Up
 - Too big: with one or both children \rightarrow Heapify-Down (example: w becomes 12)

Jan 21, 2013

CSCI211 - Sprenkle

13

Deleting an Element

Example where new key is too small

- Delete 9
- Replace with 5

Jan 21, 2013

CSCI211 - Sprenkle

14

Deleting an Element

Example where new key is too small

- Delete 9
- Replace with 5
- But $5 < 6$, so need to Heapify-Up

Jan 21, 2013

CSCI211 - Sprenkle

15

Heapify-Down

```

Heapify-down(H, i):
  n = length(H)
  if 2i > n then           Why can we stop?
    Terminate with H unchanged
  else if 2i < n then
    left=2i and right=2i+1
    j be index that minimizes
      key[H[left]] and key[H[right]]
  else if 2i = n then
    j=2i
  if key[H[j]] < key[H[i]] then
    swap array entries H[i] and H[j]
    Heapify-down(H, j)
  
```

Jan 21, 2013

CSCI211 - Sprenkle

16

Heapify-Down

```

Heapify-down(H, i):
  n = length(H)
  if 2i > n then           i is a leaf – nowhere to go
    Terminate with H unchanged
  else if 2i < n then
    left=2i and right=2i+1
    j be index that minimizes
      key[H[left]] and key[H[right]]
  else if 2i = n then
    j=2i
  if key[H[j]] < key[H[i]] then
    swap array entries H[i] and H[j]
    Heapify-down(H, j)
  
```

CSCI211 - Sprenkle

19

Practice: Heapify-Down

Jan 21, 2013

CSCI211 - Sprenkle

20

Runtime of Heapify-Down?

```

Heapify-down(H, i):
  n = length(H)
  if 2i > n then
    Terminate with H unchanged
  else if 2i < n then
    left=2i and right=2i+1
    j be index that minimizes O(1)
      key[H[left]] and key[H[right]]
  else if 2i = n then
    j=2i
  if key[H[j]] < key[H[i]] then
    swap array entries H[i] and H[j] O(1)
    Heapify-down(H, j)

```

Num swaps: $O(\log n)$

21

Implementing Priority Queues with Heaps

Operation	Description	Run Time
StartHeap(N)	Creates an empty heap that can hold N elements	
Insert(v)	Inserts item v into heap	
FindMin()	Identifies minimum element in heap but does not remove it	
Delete(i)	Deletes element in heap at position i	
ExtractMin()	Identifies and deletes an element with minimum key from heap	

Jan 21, 2013

CSCI211 - Sprenkle

22

Implementing Priority Queues with Heaps

Operation	Description	Run Time
StartHeap(N)	Creates an empty heap that can hold N elements	$O(N)$
Insert(v)	Inserts item v into heap	$O(\log n)$
FindMin()	Identifies minimum element in heap but does not remove it	$O(1)$
Delete(i)	Deletes element in heap at position i	$O(\log n)$
ExtractMin()	Identifies and deletes an element with minimum key from heap	$O(\log n)$

CSCI211 - Sprenkle

23

Putting It All Together...

1. Add elements into PQ with the number's value as its priority
2. Then extract the smallest number until done
 - Come out in sorted order

What is the running time of sorting numbers using a PQ implemented with a Heap?

$O(n \log n)$

Jan 21, 2013

CSCI211 - Sprenkle

24

Comparing Data Structures

Operation	Heap	Unsorted List	Sorted List
Start(N)			
Insert(v)			
FindMin()			
Delete(i)			
ExtractMin()			

Jan 21, 2013

CSCI211 - Sprenkle

25

Comparing Data Structures

Operation	Heap	Unsorted List	Sorted List
Start(N)	$O(N)$		
Insert(v)	$O(\log n)$		
FindMin()	$O(1)$		
Delete(i)	$O(\log n)$		
ExtractMin()	$O(\log n)$		

Jan 21, 2013

CSCI211 - Sprenkle

26

Comparing Data Structures

Operation	Heap	Unsorted List	Sorted List
Start(N)	$O(N)$	$O(1)$	$O(1)$
Insert(v)	$O(\log n)$	$O(1)$	$O(n)$
FindMin()	$O(1)$	$O(1)$	$O(1)$
Delete(i)	$O(\log n)$	$O(n)$	$O(1)$
ExtractMin()	$O(\log n)$	$O(n)$	$O(1)$

Jan 21, 2013

CSCI211 - Sprenkle

27

Additional Heap Operations

- Access elements in PQ by "name"

Key	2	4	5	6	9	20
Value	3542	5143	8712	1264	9123	5954

← Priority
← Process id

- Maintain additional array **Position** that stores current position of each element in heap

- Operations:

- **Delete(Position[v])**
 - Does not increase overall running time
- **ChangeKey(v, α)**
 - Changes key of element v to α
 - Identify position of element v in array (Position array)
 - Change key, heapify

GRAPHS

Jan 21, 2013

CSCI211 - Sprenkle

29

Undirected Graphs $G = (V, E)$

- V = nodes (vertices)
- E = edges between pairs of nodes
- Captures pairwise relationship between objects
- Graph size parameters: $n = |V|$, $m = |E|$

$V = \{1, 2, 3, 4, 5, 6, 7, 8\}$
 $E = \{1-2, 1-3, 2-3, 2-4, 2-5, 3-5, 3-7, 3-8, 4-5, 5-6\}$
 $n = 8$
 $m = 11$

CSCI2

Graph Applications

Graph	Nodes	Edges
transportation	street intersections	highways
communication	computers	fiber optic cables
World Wide Web	web pages	hyperlinks
social	people	relationships
food web	species	predator-prey
software systems	functions	function calls
scheduling	tasks	precedence constraints
circuits	gates	wires

36

Graph Representation: Adjacency Matrix

- $n \times n$ matrix with $A_{uv} = 1$ if (u, v) is an edge
 - Two representations of each edge (symmetric matrix)
 - Space?
 - Checking if (u, v) is an edge?
 - Identifying all edges?

	1	2	3	4	5	6	7	8
1	0	1	1	0	0	0	0	0
2	1	0	1	1	1	0	0	0
3	1	1	0	0	1	0	1	1
4	0	1	0	0	1	0	0	0
5	0	1	1	0	1	0	0	0
6	0	0	0	0	1	0	0	0
7	0	0	1	0	0	0	0	1
8	0	0	1	0	0	0	1	0

Jan 21, 2013

CSCI211 - Sprenkle

37

Graph Representation: Adjacency Matrix

- $n \times n$ matrix with $A_{uv} = 1$ if (u, v) is an edge
 - Two representations of each edge (symmetric matrix)
 - Space: $\Theta(n^2)$
 - Checking if (u, v) is an edge: $\Theta(1)$ time
 - Identifying all edges: $\Theta(n^2)$ time

	1	2	3	4	5	6	7	8
1	0	1	1	0	0	0	0	0
2	1	0	1	1	1	0	0	0
3	1	1	0	0	1	0	1	1
4	0	1	0	0	1	0	0	0
5	0	1	1	0	1	0	0	0
6	0	0	0	0	1	0	0	0
7	0	0	1	0	0	0	0	1
8	0	0	1	0	0	0	1	0

Jan 21, 2013

CSCI211 - Sprenkle

38

Graph Representation: Adjacency List

- Node indexed array of lists
 - Two representations of each edge
 - Space? ← What are the extremes?
 - Checking if (u, v) is an edge?
 - Identifying all edges?

Jan 21, 2013

CSCI211 - Sprenkle

39

Graph Representation: Adjacency List

- Node indexed array of lists
 - Two representations of each edge
 - Space = $2m + n = O(m + n)$
 - Checking if (u, v) is an edge takes $O(\deg(u))$ time
 - Identifying all edges takes $\Theta(m + n)$ time
