

Objectives

- Two-dimensional lists

Review

- What are the two types of search we discussed?
 - How do they work?
- What are the tradeoffs between using linear search and binary search?

2D LISTS

Dec 4, 2017

Sprenkle - CSCI111

3

Lists

- We've used lists that contain
 - Integers
 - Strings
 - Cards (Deck class)
 - Persons (your Person class)
- We discussed that lists can contain multiple types of objects within the same list
 - Wheel of Fortune: ["Bankrupt", 250, 350, ...]
- Lists can contain *any type* of object
 - Even **LISTS!**

Sprenkle - CSCI111

4

Review of Regular (1D) Lists

- Create a list

```
onedlist = [ 7, -1, 23 ]
```

- How do we find the number of elements in the list?
- How can we find the value of the third element in the list?

Dec 4, 2017

Sprenkle - CSCI111

5

Review of Regular (1D) Lists

- Create a list

```
onedlist = [ 7, -1, 23 ]
```

- `len(onedlist)` is 3
- `onedlist[2]` is 23

Dec 4, 2017

Sprenkle - CSCI111

6

A List of Lists: 2-dimensional List

```
twod[0] twod[1] twod[2]  
twod = [ [1,2,3,4], [5,6], [7,8,9,10,11] ]
```

Dec 4, 2017

Sprenkle - CSCI111

7

A List of Lists: 2-dimensional lists

```
twod = [ [1,2,3,4], [5,6], [7,8,9,10,11] ]
```

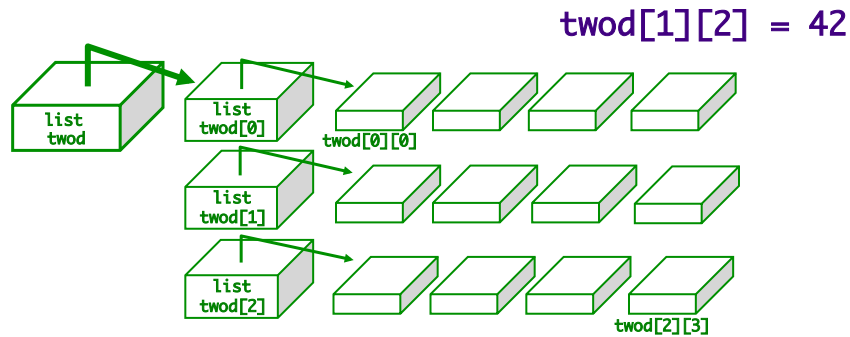

- “Rows” within 2-dimensional list do **not** need to be the same length
- However, it’s often easier if they’re the same length!
 - We’ll focus on “rectangular” 2-d lists

Dec 4, 2017

Sprenkle - CSCI111

8

Handling Rectangular Lists

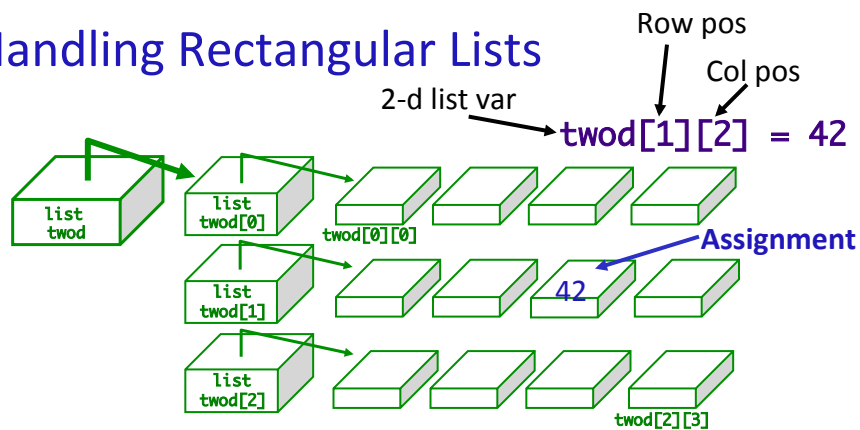

- What does each component of $twod[1][2]$ mean?
- How many rows does $twod$ have, in general?
- How many columns does $twod$ have, in general?

Dec 4, 2017

Sprenkle - CSCI111

9

Handling Rectangular Lists

- What does each component of $twod[1][2]$ mean?
- How many rows does $twod$ have, in general?
 - $rows = len(twod)$
- How many columns does $twod$ have, in general?
 - $cols = len(twod[0])$

10

Practice

Starting with the 2d list `twod` shown here, what are the values in `twod` after running this code?

`twod` Before

row 0 →	1	2	3	4
row 1 →	5	6	7	8
row 2 →	9	10	11	12
	col 0	col 1	col 2	col 3

```
def mystery(twod):  
    """ 'run' this on twod, at right """  
    for row in range( len(twod) ):  
        for col in range( len(twod[0]) ):  
            if row == col:  
                twod[row][col] = 42  
            else:  
                twod[row][col] += 1
```

`twod` After

11

Practice

Starting with the 2d list `twod` shown here, what are the values in `twod` after running this code?

`twod` Before

row 0 →	1	2	3	4
row 1 →	5	6	7	8
row 2 →	9	10	11	12
	col 0	col 1	col 2	col 3

```
def mystery(twod):  
    """ 'run' this on twod, at right """  
    for row in range( len(twod) ):  
        for col in range( len(twod[0]) ):  
            if row == col:  
                twod[row][col] = 42  
            else:  
                twod[row][col] += 1
```

`twod` After

42	3	4	5
6	42	8	9
10	11	42	13

Sprenkle - CSCI111

`mystery.py`

12

Typical Use of 2D List

1. Initialize the 2D list
 1. Make all the “spots” available in the list
 2. Initialize those spots to some value
2. Fill in the spots as appropriate.

Dec 4, 2017

Sprenkle - CSCI111

13

Example: Creating a 2d List

- ```
twod = []
```
- Create a row of the list  

```
row = [1, 2, 3, 4] or row = list(range(1,5))
```
  - Then append that row to the list  

```
twod.append(row)
```

```
print(twod)
```

    - `[[1, 2, 3, 4]]`
  - Repeat  

```
row = [1, 2, 3, 4]
```

```
twod.append(row)
```

```
print(twod)
```

    - `[[1, 2, 3, 4], [1, 2, 3, 4]]`

14

## Generalize Creating a 2D List

- Create a function that returns a 2D list with width **cols** and height **rows**
  - Initialize each element in (sub) list to 0

## Generalize Creating a 2D List

- Create a function that returns a 2D list with width **cols** and height **rows**
  - Initialize each element in list to 0

```
def create2DList(rows, cols):
 twodlist = []
 # for each row
 for row in range(rows):
 row = []
 # for each column, in each row
 for col in range(cols):
 row.append(0)
 twodlist.append(row)
 return twodlist
```

## How Does This Work?

21

## Incorrect: Creating a 2D List

- The following code **won't** work. Why?
- Explain output from example program

```
def noCreate2DList(rows, cols):
 twodlist = []
 row = []
 # create a row with appropriate columns
 for col in range(cols):
 row.append(0)
 # append the row rows times
 for r in range(rows):
 twodlist.append(row)
 return twodlist
```

23

## Graphical Representation of 2D Lists

- Module: `cspLOT`
- Allows you to visualize your 2D list
  - Numbers are represented by different colors

```
import cspLOT
...
create 2D list...
twodlist=[[0,0,0], [1,1,1], [2,2,
display list graphically
cspLOT.show(twodlist)
```

Dec 4, 2017

Sprenkle - CSCI111

## Graphical Representation of 2D Lists

- Can assign colors to numbers

```
import csplot
```

```
...
```

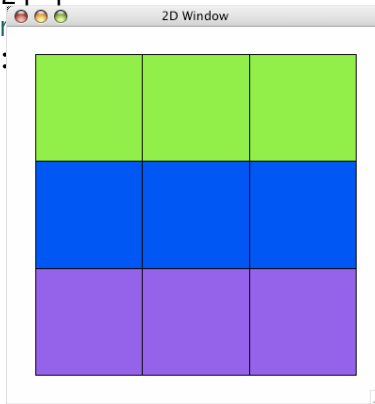

```
create 2D list...
```

```
twodlist= [[0,0,0], [1,1,1], [2,2,2]]
```

```
create optional dictionary of num
```

```
numToColor={0:"purple", 1:"blue", 2:
```

```
csplot.show(twodlist, numToColor)
```

Dec 4, 2017

Sprenkle - CSCI111

## Graphical Representation of 2D Lists

```
matrix = [[0,0,0], [1,1,1], [0,1,2]]
```

What values map  
to which colors  
by default?

Dec 4, 2017

Spren

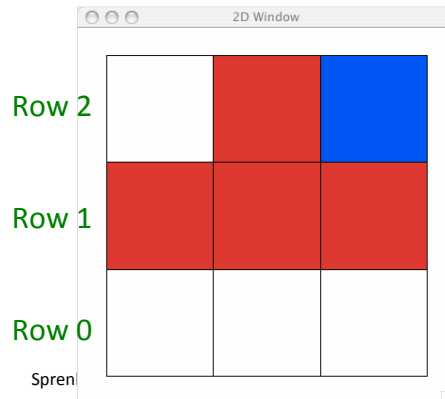

26

## Graphical Representation of 2D Lists

- Note that representation of rows is backwards from how we've been visualizing

```
matrix = [[0,0,0], [1,1,1], [0,1,2]]
```

What values map to which colors by default?

## Game Board for Connect Four

- 6 rows, 7 columns board
- Players alternate dropping red/black checker into slot/column
- Player wins when have four checkers in a row vertically, horizontally, or diagonally

How do we represent the board as a 2D list, using a graphical representation?

Dec 4, 2017

Sprenkle - CSCI111

28

## Game Board for Connect Four

- How to represent board in 2D list, using graphical representation?

| Number | Meaning  | Color  |
|--------|----------|--------|
| 0      | Free     | Yellow |
| 1      | Player 1 | Red    |
| 2      | Player 2 | Black  |

## ConnectFour Class

- What is the data associated with the class?
- What methods should we implement?

## ConnectFour Class

- Data
  - Board + constants
    - 6 rows, 7 columns, all FREE to start
- Methods
  - Constructor
  - Display the board
  - Play the game
  - Get input/move from user
  - Check if valid move
  - Make move
  - Check if win

## ConnectFour Constants

```
class ConnectFour:
 """ Class representing the game Connect Four. """

 # Represent different values on the board
 FREE = 0
 PLAYER1 = 1
 PLAYER2 = 2

 # Represent the dimensions of the board
 ROWS = 6
 COLS = 7
```

Dec 4, 2017

Sprenkle - CSCI111

33

## ConnectFour Class

- Play the game method implementation

- ▶ Repeat:

- Get input/move
- Check if valid move
- Make move
- Display board
- Check if win
- Change player

```
def play(self):
 won = False
 player = ConnectFour.PLAYER1

 while not won:
 print("Player %d's move" % player)
 if player == ConnectFour.PLAYER1:
 col = self._userMakeMove()
 else: # computer is player 2
 # pause because otherwise move happens too
 # quickly and looks like an error
 sleep(.75)
 col = self._computerMakeMove()

 row = self.makeMove(player, col)
 self.showBoard()
 won = self._isWon(row, col)

 # alternate players
 player = player % 2 + 1
```

Dec 4, 2017

Sprenkle - CSCI111

34

## Connect Four (C4): Making moves

- User clicks on a column
  - “Checker” is filled in at that column

```
gets the column of where user clicked
col = csplot.sinput()
```

```
def _userMakeMove(self):
 """ Allow the user to pick a column."""
 col = csplot.sinput()
 validMove = self._isValidMove(col)
 while not validMove:
 print("NOT A VALID MOVE.")
 print("PLEASE SELECT AGAIN.")
 print()
 col = csplot.sinput()
 validMove = self._isValidMove(col)
 return col
```

Dec 4, 2017

Sprenkle - CSCI111

35

## Problem: C4 - Valid move?

- Need to enforce valid moves
  - In physical game, run out of spaces for checkers if not a valid move
- How can we determine if a move is valid?
  - How do we know when a move is *not* valid?

Dec 4, 2017

Sprenkle - CSCI111

36

## Problem: C4 - Valid move?

- Solution: check the “top” spot
  - If the spot is FREE, then it’s a valid move

Dec 4, 2017

Sprenkle - CSCI111

37

## Problem: C4 - Making a Move

- The player clicks on a column, meaning that’s where the player wants to put a checker
- How do we update the board?

Dec 4, 2017

Sprenkle - CSCI111

38

## Looking Ahead

- Lab 10 – due tomorrow
- Lab 11 – Tomorrow
- Broader Issue: Net Neutrality – Friday
- Friday Exam envelopes
