

Objectives

- Indefinite Loop
- Broader Issue: Computer Science Education

March 10, 2017

Sprenkle - CSCI111

1

Review

- How can you make a function have a default value for a parameter?
- What is a key difference between what happens when we pass a list to a function vs pass a different type (int, string, float) to a function?
- What are the tradeoffs in programmatically testing functions?

March 10, 2017

2

INDEFINITE LOOPS

March 10, 2017

Sprenkle - CSCI111

3

Indefinite Loops

- **for** loops are *definite* loops
 - Execute a *fixed* number of times
- *Indefinite* loops: keep iterating until certain conditions are met
 - Depending on condition, no guarantee in advance of how many times the loop body will be executed

March 10, 2017

Sprenkle - CSCI111

4

While Loop Syntax

```
while condition :  
    statement1  
    statement2  
    ...  
    statementn
```

keyword

body of while loop

loop stops when condition is False

- Like a looped **if** statement
 - Execute statements **only** when condition is true

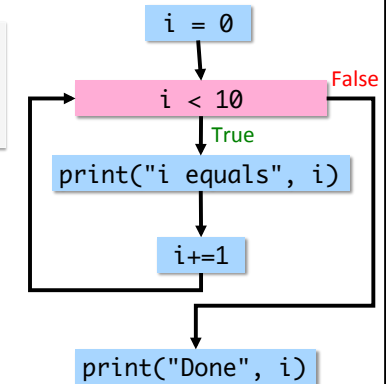

March 10, 2017

Sprenkle - CSC1111

5

While Loop

```
i = 0  
while i < 10 :  
    print("i equals", i)  
    i += 1  
print("Done", i)
```

Questions:

- How many times will **i** get printed out?
- How many times is the condition evaluated?
- What is the value of **i** after the loop?

March 10, 2017

Sprenkle - CSC1111

while.py

6

While Loop

```
i = 0  
while i < 10 :  
    print("i equals", i)  
    i += 1  
print("Done", i)
```

Initialize i before using in condition

```
graph TD  
    A[i = 0] --> B{i < 10}  
    B -- True --> C[print("i equals", i)]  
    C --> D[i += 1]  
    D --> B  
    B -- False --> E[print("Done", i)]
```

Questions:

- How many times will **i** get printed out?
- How many times is the condition evaluated?
- What is the value of **i** after the loop?

while.py

7

While vs. For Loops

- Any **for** loop can be translated into a **while** loop
 - But **NOT** vice versa

➤ **while** loops are more **powerful** than **for** loops

March 10, 2017

Sprenkle - CSC1111

8

Convert to a for loop

We **can** convert this **while** loop into a **for** loop because it executes a **fixed** number of times.

```
i = 0
while i < 10 :
    print("i equals", i)
    i+=1
print("Done", i)
```

March 10, 2017

Sprenkle - CSC1111

9

Comparing while and for

- What are the main differences between these loops?
- What are the advantages and disadvantages of each?

```
i = 0
while i < 10 :
    print("i equals", i)
    i+=1
print("Done", i)
```

```
for i in range(10):
    print("i equals", i)
print("Done", i+1)
```

10

What Will This Loop Do?

```
count = 1
while count > 0:
    print(count)
    count += 1
```

Sprenkle - CSC1111

[loop.py](#)

11

Infinite Loop

- Condition will never be False so keeps executing

```
count = 1
while count > 0:
    print(count)
    count += 1
```

- To stop an executing program in Linux use
➤ Control-C

12

Infinite Loop Discussion

- Is there ever a time that an infinite loop is wanted?
 - Yes! For example in web servers, we have something like
- Can a computer automatically detect infinite loops?
 - No that is an **undecidable** problem
 - Best to **prevent** infinite loops (more later)
 - Benefit of **for** loops: definite loops

```
while True:
    listenForRequest()
    handleRequest()
```

A Very Simple Therapist

- Whenever a user tells the computer/program what they think, the program asks, "How does that make you feel?"
- Ends when user enters nothing ("")
- Partial example output:

```
Tell me what is bothering you.
There is too much going on in my life.
How does that make you feel?
I feel like I am out of control and can't juggle it all.
How does that make you feel?
Really stressed and tired.
How does that make you feel?

Thank you! Come again!
```

14

Design Pattern: Sentinel Loop

- Sentinel: when to stop
 - "guard" to the loop

```
value = get input
while value != sentinel :
    process value
    value = get input
```

15

Another Way to Read from a File

```
FILENAME="data/years.dat"
dataFile = open(FILENAME, "r")

line = dataFile.readline()

while line != "":
    line = line.rstrip()
    print(line)
    line = dataFile.readline()

dataFile.close()
```

file_read_while.py

16

Summary: While vs. For Loops

- Any **for** loop can be translated into a **while** loop
 - But **not** vice versa
- **while** loops are more **powerful** than **for** loops
 - Give an example of a **while** loop that can't be converted to a **for**

Computer Science Education

- Who should be interested in computer science education?
- When should computer science be taught?
 - What are the tradeoffs?
 - What forms can it take?
- Is Computer Science an acceptable replacement for foreign language?
 - If not foreign language, where does it fit?
- What are the effects of encouraging more computer science education?

March 10, 2017

Sprenkle - CSCI111

19

Computer Science Education

- How many of your high schools offered
 - Computing courses?
 - AP Computer Science?
- How many of you would recommend computer science to a friend?

March 10, 2017

Sprenkle - CSCI111

20

Discussion

- Tradeoffs: Computer science education
 - Availability of Resources – computers, qualified teachers
 - Students' ability to learn
 - Some people's brains don't develop their ability to think abstractly until their mid 20's
- Don't let the struggle bring you down.
→ Keep working, trying, failing, and ultimately succeeding!
