

Objectives

- Designing our own classes
 - Representing attributes/data
 - What functionality to provide
- Using our defined classes

Mar 22, 2017

Sprenkle - CSCI111

1

Where We Are

- With what you now know (OO programming)
 - Opens up the possibilities for what you kinds of programs you can write
 - Just about anything computational is possible
- Example: Car
 - Data to model for a Car?
 - API for a Car?

Mar 22, 2017

Sprenkle - CSCI111

2

Review: Classes and Objects

- Car class
- Each car has these **attributes**:
 - Make
 - Model
 - Year
 - Transmission
 - Exterior color

Cars all have these attributes, different values for the attributes
- **Methods**
 - getYear()
 - setGear()
 - ...

Each car is an **instance of** the Car class

Mar 22, 2017

Sprenkle - CSCI111

3

Review: Object-Oriented Programming

- Why do we want to define classes/new data types?
- What is the keyword to create a new class?
- How do you define a method?
 - What parameter is needed in every method?
- How do you create a new object of a given class?
 - What method does this call?
- How do we access instance variables in other methods?

Mar 22, 2017

Sprenkle - CSCI111

4

Algorithm for Creating Classes

1. Identify need for a class
2. Identify state or attributes of a class/an object in that class
 - Write the constructor (`__init__`) and `__str__` methods
3. Identify methods the class should provide
 - How will a user call those methods (parameters, return values)?
 - Develop API
 - Implement methods

Mar 22, 2017

Sprengle - CSC1111

5

Review: Classes and Objects

```
c1 = Card(14, "spades")
c2 = Card(13, "hearts")
```

Instance variables: named beginning with `_`

Mar 22, 2017

Sprengle - CSC1111

6

Card Class (Incomplete)

```
class Card:
    """ A class to represent a standard playing card.
        The ranks are ints: 2-10 for numbered cards, 11=Jack,
        12=Queen, 13=King, 14=Ace.
        The suits are strings: 'clubs', 'spades', 'hearts',
        'diamonds' """
    def __init__(self, rank, suit):
        """Constructor for class Card takes int rank and
        string suit."""
        self._rank = rank
        self._suit = suit
    def getRank(self):
        "Returns the card's rank."
        return self._rank
    def getSuit(self):
        "Returns the card's suit."
        return self._suit
```

Doc String

Methods are like functions defined in a class

card.py

Mar 22, 2017

Sprengle - CSC1111

7

Defining the Constructor

- `__init__` method is like the *constructor*
- In constructor, define *instance variables*
 - Data contained in every object
 - Also called *attributes* or *fields*
- Constructor *never returns* anything
 - First parameter of every method is `self`**
 - pointer to the object that method acts on

```
def __init__(self, rank, suit):
    """Constructor for class Card takes int rank
    and string suit."""
    self._rank = rank
    self._suit = suit
```

Instance variables

Mar 22, 2017

Sprengle - CSC1111

8

Using the Constructor

```
def __init__(self, rank, suit):
```

- As defined, constructor is called using `Card(<rank>, <suit>)`
 - Do not *pass* anything for the `self` parameter
 - Python handles for us, passing the parameter automatically
- Example:
 - `card = Card(2, "hearts")`
 - Creates a 2 of Hearts card
 - Python passes `card` as `self` for us

```
Object card  
of type Card
```

```
_rank = 2  
_suit = "hearts"
```

Mar 22, 2017

Sprengle - CSC1111

9

Accessor Methods

- Need to be able to get information about the object

- Have `self` parameter
- Return data/information

```
def getRank(self):  
    "Returns the card's rank."  
    return self._rank
```

```
def getSuit(self):  
    "Returns the card's suit."  
    return self._suit
```

- These methods will get called as `card.getRank()` and `card.getSuit()`
 - Python plugs `card` in for `self`

Mar 22, 2017

Sprengle - CSC1111

10

Another Special Method: `__str__`

- Returns a *string* that describes the object
- Whenever you `print` an object, Python checks if the object's `__str__` method is defined
 - Prints result of calling `__str__` method
- `str(<object>)` also calls `__str__` method

```
def __str__(self):  
    """Returns a string  
    describing the card as  
    'rank of suit'."""  
    result = ""  
    if self._rank == 11:  
        result += "Jack"  
    elif self._rank == 12:  
        result += "Queen"  
    elif self._rank == 13:  
        result += "King"  
    elif self._rank == 14:  
        result += "Ace"  
    else:  
        result += str(self._rank)  
    result += " of " + self._suit  
    return result
```

self is a
Card object

Mar 22, 2017

Sprengle - CSC1111

11

Using the Card Class

Invokes the
`__str__` method

```
def main():  
    c1 = Card(14, "spades")  
    print(c1)  
    c2 = Card(13, "hearts")  
    print(c2)
```

Displays:

Ace of spades
King of hearts

```
Object c1 of  
type Card  
_rank = 14  
_suit = "spades"
```

```
Object c2 of  
type Card  
_rank = 13  
_suit = "hearts"
```

Mar 22, 2017

Sprengle - CSC1111

12

Creating a Deck Class (Partial)

- List of Card objects

```
from card import *  
  
class Deck:                                Initialize instance variable,  
    def __init__(self):                    self._listOfCards  
        self._listOfCards = []  
        for suit in ["clubs","hearts","diamonds","spades"]:  
            for rank in range(2,15):  
                self._listOfCards.append(Card(rank, suit))  
  
    def __str__(self):                      Creates and returns a string  
        deckRep= ""  
        for c in self._listOfCards:  
            deckRep += str(c) + "\n"      ← Represents cards  
        return deckRep                    on separate lines
```

Actual code should have doc strings

Mar 22, 2017

Sprengle - CSC1111

13

Deck Class

- What does the Deck API look like so far?

Mar 22, 2017

Sprengle - CSC1111

14

Deck API

- Deck() Constructor
- __str__()

Mar 22, 2017

Sprengle - CSC1111

15

Deck API

- What additional methods should our Deck class provide?
- What do the method headers look like?
 - Deck's API
- What should they return?
- How do we implement them?

Mar 22, 2017

Sprengle - CSC1111

16

Deck API

- Deck() ← Constructor
- shuffle()
- draw()
- deal(num_cards)
- numRemaining()
- isEmpty()
- __str__()

Mar 22, 2017

Sprengle - CSCI111

17

__LT__ and __EQ__ METHODS

Mar 22, 2017

Sprengle - CSCI111

18

__eq__: Compare Objects of Same Type

- Header: **def __eq__(self, other)**
 - Assumption: **other** is another object of the *same type*
- Returns
 - True if **self** is equivalent to **other**
 - False otherwise
- Can now use objects in comparison expressions
 - ==

How would you determine if two Card objects are equivalent?

Mar 22, 2017

Sprengle - CSCI111

19

__lt__: Compare Objects of Same Type

- Header: **def __lt__(self, other)**
 - Assumption: **other** is another object of the *same type*
- Returns
 - True if **self** < **other**
 - False otherwise
- Can now use objects in comparison expressions
 - <, sort

How do you compare two Card objects?

Mar 22, 2017

Sprengle - CSCI111

20

Comparing Objects of the Same Type

```
def __eq__(self, other):  
    """ Compares Card objects by their ranks and suits """  
    if type(self) != type(other):  
        return False  
  
    return self.rank == other.rank and self.suit == other.suit  
  
# Could compare by black jack or rummy value
```

```
def __lt__(self, other):  
    """ Compares Card objects by their ranks """  
    if type(self) != type(other):  
        return False  
  
    return self.rank < other.rank
```

Mar 22, 2017

Sprengle - CSCI111

card.py

21

Frequency Object

```
def __lt__(self, other):  
    """Compares this object with other, which is  
    also a FrequencyObject. Used by default when  
    using the  
    list's sort method."""  
  
    return self.count < other.count
```

Mar 22, 2017

Sprengle - CSCI111

22

HELPER METHODS

Mar 22, 2017

Sprengle - CSCI111

23

Helper Methods

- Part of the class
- **Not** part of the API
- Make your code easier but others outside the class shouldn't use
- Convention: method name begins with “_”

Let's create a method that determines if a Card is a face card!

Mar 22, 2017

Sprengle - CSCI111

24

Example Helper Methods

- Only *loosely* enforces that other can't use
 - Doesn't show up in **help**
 - Does show up in **dir**

Helper Method:

```
def _isFaceCard(self):
    if self._rank > 10 and self._rank < 14:
        return True
    return False

def rummyValue(self):
    if self._isFaceCard():
        return 10
    elif self._rank == 10:
        return 10
    elif self._rank == 14:
        return 15
    else:
        return 5
```

In use:

Mar 22, 2017

card2.py

Sprengle - CSC111

27

Summary: Designing Classes

- What does the object/class represent?
- How to model/represent the class's *data*?
 - Instance variable
 - Data type
- What *functionality* should objects of the class have?
 - How will others want to use the class?
 - Put into methods for others to call (API)

Mar 22, 2017

Sprengle - CSC111

26

Looking Ahead

- Lab 9: Analysis of student names at W&L
 - Staggered extension
 - **MUST complete first two questions by Friday at class**
 - Run turnin script to get credit that you turned in the first two questions.
 - All due Monday before class
 - Keep in mind: no students assistants or office hours over the weekend
- Exam 2

Mar 22, 2017

Sprengle - CSC111

27

Exam 2

- Cumulative
- Focused on things after first exam (see prep document)

Mar 22, 2017

Sprengle - CSC111

28

Exam 2: Practice!

- Read, understand code
 - Write down what you think the result will be
 - Run the code to verify
 - Check out interactive exercises in the book
- Functions
 - Calling functions
 - Writing functions
 - What should you do with what the function returns?
 - Refactoring code
