

## Lab 10 Feedback

- Problem solving capstone!
  - Solving lots of different small problems in a variety of ways
- Use methods you've already written
  - Example: use `addPerson` in `addPeople`
  - Who has this functionality? Do I have access to that object in this method?
- Adhere to interface
  - Accepted parameter types
  - Type of what is returned

1

## Lab 11: Three Parts

- Linux practice:
  - Using the `WC` command
- Social Network extensions
  - Handling file exceptions
  - Binary search – find people with a certain name
  - UI: add search functionality
- Two-dimensional lists
  - Including Connect Four

Apr 4, 2017

Sprenkle - CSCI111

2

## WC Command

- **WC**: Word Count
  - Counts the lines of Social Network code from Lab 10
  - Compare with code for this assignment
- Example:
  - `wc -l ../lab10/*.py`
- Specific directions are in the lab

3

## Social Network, Extended

- Searching Overview
  - Allows you to search for people by their name—lowercased—for more intuitive results
  - Update `Person` and `SocialNetwork` classes and UI appropriately
    - Specific directions are in the lab

4

## Summary of Modifications to Binary Search

- Add a search method
  - Takes as parameter the name to search for
    - Need to lowercase that name
  - Original binary search function took a list as a parameter; where should we get our list to search?
- Check the *name* of the Person that is at the midpoint, lowercased
- If we have a match, return that Person
- Represent (in method) and handle (in UI) when no person has that name

## SocialNetwork Code

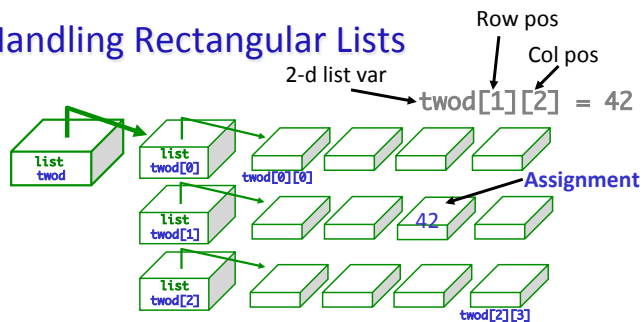

- Fix the major problems in your code first
- Or, use the code in the `handouts/lab10_solution` directory
  - `person.py`, `social.py`, `facespace.py`

## 2D LISTS

## Review

- How do you create a 2D list?
- How do you get the 2<sup>nd</sup> element in the 3<sup>rd</sup> “row” of a list?
- How do you find the number of lists in a 2D list?
- How do you find the number of elements in one of those lists?

## Handling Rectangular Lists

- What does each component of  $twod[1][2]$  mean?
- How many rows does  $twod$  have, in general?  
  - $rows = len(twod)$
- How many columns does  $twod$  have, in general?  
  - $cols = len(twod[0])$

## Game Board for Connect Four

- 6 rows, 7 columns board
- Players alternate dropping red/black checker into slot/column
- Player wins when have four checkers in a row vertically, horizontally, or diagonally

How do we represent the board as a 2D list, using a graphical representation?

10

## Game Board for Connect Four

- How to represent board in 2D list, using graphical representation?

Number	Meaning	Color
0	Free	Yellow
1	Player 1	Red
2	Player 2	Black

11

## Connect Four (C4): Making moves

- User clicks on a column  
  - "Checker" is filled in at that column

```
# gets the column of where user clicked
col = csplot.sinput()
```

12

## ConnectFour Class

- Play the game method implementation

- Repeat:

- Get input/move
- Check if valid mo
- Make move
- Display board
- Check if win
- Change player

```
won = False
player = ConnectFour.PLAYER1
while not won:
    print("Player %d's move" % player)
    if player == ConnectFour.PLAYER1:
        col = self._userMakeMove()
    else: # computer is player 2
        # pause because otherwise move happens too
        # quickly and looks like an error
        sleep(.75)
        col = self._computerMakeMove()
    row = self.makeMove(player, col)
    self.showBoard()
    won = self._isWon(row, col)
    # alternate players
    player = player % 2 + 1
```

## Problem: C4 - Making a Move

- The player clicks on a column, meaning that's where the player wants to put a checker
- How do we update the board?

## Looking Ahead

- Bring your final exam envelopes to me by Friday
  - Exam will be taken in Parmly 405
- Bring your final exam questions Friday

Thanks to **Alex, Jake, Sarah Anne, and Ethiopia** for their help this semester!
