

Objectives

- Review algorithms
- Programming in Python
 - Data types
 - Expressions
 - Variables
 - Arithmetic
- Broader Issue: Algorithms

1

Review

- What did we learn from the drawing instruction exercise?
- Why do we need programming languages?
 - What are characteristics of programming languages?
- What programming language will we use in this class?
 - What does the *interpreter* do?
 - How can we run the interpreter? What modes does it have?
 - How do we display *output* in that language?
 - What are the *primitive data types*?
- What is an algorithm?
 - What are components/parts of an algorithm?
 - Pick a TV show or movie: What is the algorithm for the TV show/movie?

2

“Really?” with Professor Sprenkle

- In *TV Guide*, showrunners of *Once Upon a Time* were asked, “Give us an algorithm for your show.”

3

“Really?” with Professor Sprenkle

- In *TV Guide*, showrunners of *Once Upon a Time* were asked, “Give us an algorithm for your show.”
 - Example (for first season): 1 part *Snow White* + 1 part *Lost* + .5 *Alias*
- They said, “We don’t understand math. That’s why we became writers.”

4

Review: Parts of an Algorithm

- Input, Output
- Primitive operations
 - What data you have, what you can do to the data
- Naming
 - Identify things we're using
- Sequence of operations
- Conditionals
 - Handle special cases
- Repetition/Loops
- Subroutines
 - Call, reuse similar techniques

An overview for the semester!

5

Review: Discussion of PB&J

- The computer: a blessing and a curse
 - Recognize and meet the challenge!
- Be unambiguous, descriptive
 - Must be clear for the computer to understand
 - "Do what I **meant!** Not what I said!"
 - Motivates programming languages
- Creating/Implementing an algorithm
 - Break down pieces
 - Try it out
 - Revise

6

Review: Discussion of PB&J

- Steps need to be done in a particular order
- Be prepared for special cases
- Aren't necessarily spares in real life
 - Need to write correct algorithms!
- Reusing similar techniques
 - Do the same thing with a little twist
- Looping
 - For repeating the same action

Jan 22, 2021

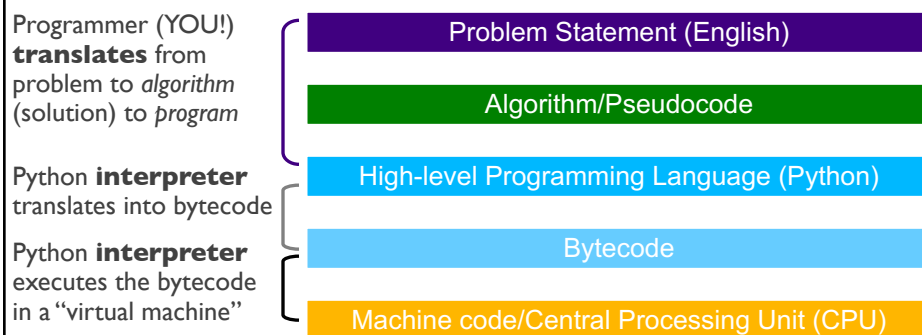

Sprenkle - CSCI111

7

7

Review: Why Do We Need Programming Languages?

- Computers can't understand English
 - Too ambiguous
- Humans can't easily write machine code

Jan 22, 2021

Sprenkle - CSCI111

8

8

Review: Python Interpreter

1. Validates Python programming language expression(s)
 - Enforces Python **syntax**
 - Reports **syntax** errors
2. Executes expression(s)
 - Runtime errors (e.g., divide by 0)
 - **Semantic** errors (not what you *meant*)

Jan 22, 2021

Sprenkle - CSCI111

9

9

Review: Modes to Execute Python Code

- **Interactive/Shell**

- Try out Python expressions

```
xterm
sprenkle@Saras-MacBook-Pro: ~ % python3
Python 3.7.3 (tags/v3.7.3:1e4238c2; Mar 25 2019, 16:52:21)
[Clang 6.0 (clang-600.0.57)] on darwin
Type "help", "copyright", "credits" or "license()" for more information.
>>> 3
3
>>> 4*5
9
>>> 1-7
-6
>>> "word"
'word'
>>> word
Traceback (most recent call last):
  File "<stdin>", line 1, in <module>
NameError: name 'word' is not defined
>>> print 4*5
  File "<stdin>", line 1
    print 4*5
    ^
SyntaxError: Missing parentheses in call to 'print'. Did you mean print(4*5)?
>>> print(4*5)
9
>>> []
```

- **Batch:** execute *scripts* (i.e., files containing Python code)

- What we'll write usually

10

10

Review: Primitive Types

| Python Data Type | Description | Examples |
|----------------------|--|----------------------------------|
| <code>int</code> | Plain integers (32-bit precision) | -214, -2, 0, 2, 100 |
| <code>float</code> | Real numbers | .001, -1.234, 1000.1, 0.00, 2.45 |
| <code>complex</code> | Imaginary numbers (have real and imaginary part) | $1j * 1j \rightarrow (-1+0j)$ |
| <code>str</code> | Text, enclosed in matching single or double quotes | "my cat", "123", 'Hello!' |
| <code>bool</code> | True or false | True, False |

Jan 22, 2021

Sprenkle - CSCI111

11

11

What is the value's type?

| Value | Type |
|------------|------|
| 52 | |
| -0.01 | |
| 4+6j | |
| "3.7" | |
| 4047583648 | |
| True | |
| 'false' | |

Jan 22, 2021

Sprenkle - CSCI111

12

12

What is the value's type?

| Value | Type |
|------------|---------|
| 52 | int |
| -0.01 | float |
| 4+6j | complex |
| "3.7" | str |
| 4047583648 | int |
| True | boolean |
| 'false' | str |

Parts of an Algorithm

- Input, Output
- Primitive operations
 - What data you have, what you can do to the data
- ➔ Naming
 - Identify things we're using
- Sequence of operations
- Conditionals
 - Handle special cases
- Repetition/Loops
- Subroutines
 - Call, reuse similar techniques

Introduction to Variables

- Variables save data/information
 - Example: first slice of bread or knife A
 - Type of data the variable holds can be any of primitive data types as well as other data types we'll learn about later
- Variables have names, called *identifiers*

Variable Names/Identifiers

- A variable name (identifier) can be any one word that:
 - Consists of letters, numbers, or _
 - Does *not* start with a number
 - Is not a Python reserved word
 - Examples: **for** **while** **def**
- Python is case-sensitive:
 - **change** isn't the same as **Change**

Variable Name Conventions

- **Variables** start with lowercase letter
- Convention: **Constants** (values that won't change) are all capitals

➤ (more on this later...)

- Example: Variable for the current year

➤ `currentYear`

➤ `current_year`

➤ `CURRENT_YEAR`

➤ ~~`currentyear`~~

➤ ~~`current year`~~

Naming doesn't matter to computer,
matters to humans

Harder to read

No spaces allowed

Jan 22, 2021

Sprenkle - CSCI111

17

17

Importance of Variable Naming

- Helps you *remember* what the variable represents
- Easier for others to *understand* your program
- Examples:

| Info Represented | Good Variable Name |
|-------------------------------|--|
| A person's first name | <code>firstName</code> , <code>first_name</code> |
| Radius of a circle | <code>radius</code> |
| If someone is employed or not | <code>isEmployed</code> |

Jan 22, 2021

Sprenkle - CSCI111

18

18

Review: Computational Problem Solving

- **Computational Problem:**
A problem that can be solved by logic
- To solve the problem:
 - ➔ Create a **model** of the problem
 - Design an **algorithm** for solving the problem using the model
 - Write a **program** that *implements* the algorithm

Jan 22, 2021

Sprenkle - CSCI111

19

19

Modeling Information

- How would you **model** this information?
- What data type best represents the info?

| Info Represented | Data Type | Variable Name |
|--------------------|-----------|---------------|
| A person's salary | | |
| Sales tax | | |
| If item is taxable | | |
| Course name | | |
| Graduation Year | | |

Jan 22, 2021

Sprenkle - CSCI111

20

20

Modeling Information

- How would you *model* this information?
- What data type best represents the info?

| Info Represented | Data Type | Variable Name |
|--------------------|--------------|---------------|
| A person's salary | int or float | salary |
| Sales tax | float | salesTax |
| If item is taxable | bool | isTaxable |
| Course name | str | course_name |
| Graduation Year | int | gradYear |

Variable names are just suggestions,
Many other possible variable names

Jan 22, 2021

Sprenkle - CSCI111

21

21

Assignment Statements

- Variables can be given a value using =
 - **Syntax:** <variable> = <expression>
 - **Semantics:** <variable> is set to value of <expression>
- After a variable is set to a value, the variable is said to be *initialized*
- Examples:

```
month = 1
impt_num = 4.5
monthName = 'January'
```

These are **not** equations!
Read "=" as "is set to"

Jan 22, 2021

Sprenkle - CSCI111

22

22

Variables: The Rules

- Only the variable(s) to **left** of the = in the current statement change
 - We'll usually only have one variable on the left
- **Initialize** a variable **before** using it on the right-hand side (rhs) of a statement

23

Assignment Statements

```
x = 5  
y = x
```

Computer
Memory

- Statements execute in order, from top to bottom
- Value of **x** does not change because of second assignment statement

24

Assignment Statements

```
x = 5  
y = x
```

Does a "lookup"
in memory to find
value of X

- Statements execute in order, from top to bottom
- Value of **x** does not change because of second assignment statement

Jan 22, 2021

Sprenkle - CSCI111

25

25

Literals

- Pieces of data that are not variables are called ***literals***
 - We've been using these a lot
- Examples:
 - 4
 - 3.2
 - 'q'
 - "books"

Jan 22, 2021

Sprenkle - CSCI111

26

26

Numeric Arithmetic Operations

| Symbol | Meaning |
|--------|------------------------|
| + | Addition |
| - | Subtraction |
| * | Multiplication |
| / | Division |
| % | Remainder ("mod") |
| ** | Exponentiation (power) |

Arithmetic & Assignment

- You can use the assignment operator (=) and arithmetic operators to do calculations
 1. Calculate right hand side
 2. Assign value to variable
- Remember your order of operations! (PEMDAS)
- Examples:

$$x = 4 + 3 * 10$$

$$y = 3 / 2.0$$

$$z = x + y$$

The right-hand sides are **expressions**, just like in math.

Arithmetic & Assignment

- Examples:

$$x = 4 + 3 * 10$$

$$y = 3 / 2.0$$

$$z = x + y$$

Computer
Memory

- For last statement

- need to “lookup” values of X and y
- computer remembers the result of the expression, not the expression itself

Jan 22, 2021

Sprenkle - CSCI111

29

29

Arithmetic & Assignment

- Examples:

$$x = 4 + 3 * 10$$

$$y = 3 / 2.0$$

$$z = x + y$$

- For last statement

- need to “lookup” values of X and y
- computer remembers the result of the expression, not the expression itself

Jan 22, 2021

Sprenkle - CSCI111

30

30

Broader Issue: Typical Process

1. Break into assigned groups
2. Introduce yourselves
3. Answer questions in groups
4. Discuss in class

31

Broader CS Issues

- Good summaries!
 - Good English, complete sentences
 - Followed the specifications
- Good, thoughtful questions
 - A lot are teasers to what I hope we'll talk about later this term
- Interest scale is 0 to 9
 - Recall: Lab 0
 - Why we start at 0 will be clearer soon...

32

Algorithms Everywhere

- Comment on these from articles:
 - “Because it’s less familiar, *algorithm* tends to emphasize our uncertainty.”
 - “An algorithm is, essentially, a brainless way of doing clever things.”
- What are examples of algorithms that you do every day?
- What is machine learning useful for?
- What aren’t algorithms useful for?
- What would be some useful algorithms, specific to W&L students?
 - What are problems that are difficult—but useful—to solve?

Jan 22, 2021

Sprenkle - CSCI111

33

33

My Corrections to Articles

- “In his book *The Master Algorithm*, Pedro Domingos offers a masterfully simple definition: ‘An algorithm is,’ Domingos writes, ‘a sequence of instructions telling ~~a computer~~ what to do.’”
- “An algorithm is, essentially, a ~~brainless~~ way of doing clever things.”
 -

34

Looking Ahead

- Extra Credit Opportunity:
 - Read an article that relates to CS
 - Summarize it on the discussions under “Extra Credit”
 - 5 pts extra credit added to lab grade
- Textbook Pre Lab 1 assignment due before lab on Tuesday
 - We won't have covered everything in assignment until after Monday's class
 - Book has changed since I last used
 - Let me know if there are problems
