

Objectives

- Introduction to Object-Oriented Programming
- Introduction to APIs

- Get handouts from last time

Jan 29, 2021

Sprenkle - CSCI111

1

1

Review

- How should you “read” each of these expressions? What do they mean?
 - `rem = num1 % num2`
 - `x += 1`
- How do we convert from one data type to another?
- How do we get input from a user?
 - Give an example of getting input from a user, one where we want a string and one where we want a number

Jan 29, 2021

Sprenkle - CSCI111

2

2

Review: Modulo Operator: %

- Modular Arithmetic: Remainder from division
 - $x \% y$ means the remainder of $x//y$
 - Read as “x mod y”
- Example: $6 \% 4$
 - Read as “six mod four”
 - $6//4$ is 1 with a remainder of 2, so $6\%4$ evaluates to 2
- Works only with integers
 - Typically just positive numbers
- Precedence rules: P E - DM% AS

Jan 27, 2021

Sprenkle - CSCI111

3

3

Review: Trick: Arithmetic Shorthands

- Called **extended assignment operators**
- Increment Operator
 - $x = x + 1$ can be written as $x += 1$
- Decrement Operator
 - $x = x - 1$ can be written as $x -= 1$
- Shorthands are similar for $*$, $/$, $//$:
 - `amount *= 1.055`
 - `x //= 2`

Jan 27, 2021

Sprenkle - CSCI111

4

4

Review: Type Conversion

- You can convert a variable's type
 - Use the type's *constructor*

Conversion Function/Constructor	Example	Value Returned
<code>int(<number or string>)</code>	<code>int(3.77)</code> <code>int("33")</code>	3 33
<code>float(<number or string>)</code>	<code>float(22)</code>	22.0
<code>str(<any value>)</code>	<code>str(99)</code>	"99"

Jan 29, 2021

Sprenkle - CSCI111

5

5

Review: Getting Input From User

- `input` is a *function*
 - **Function:** A command to do something
 - A "subroutine"
 - Syntax:
 - `input(<string_prompt>)`
 - Semantics:
 - Display the prompt `<string_prompt>` in the terminal
 - Read in the user's input and *return* it as a string/text

Jan 27, 2021

Sprenkle - CSCI111

6

6

Getting Input From a User

- Save the result of calling input in a variable

➤ Ex:

```
color = input("What is your favorite color? " )
```

- If you want the assigned variable to be of type int or float, we need to convert the result of calling input

➤ Ex:

```
height = eval(input("Enter the height: " ))  
width = float(input("Enter the width: "))
```

Jan 29, 2021

Tradeoffs in which approach to use. For another time...

7

Review: Improving average2.py

- With what we just learned, how could we improve `average2.py`?
- Example of suggested approach to development
 1. Solve the problem, using hard-coded values
 2. Then add input
- Why?
 - Input is going to become fairly routine.
 - Faster to run program when you are testing and running a bunch of times
 - (no typing)

Jan 29, 2021

Sprenkle - CSCI111

8

8

Design Patterns

- General, repeatable solution to a commonly occurring problem in software design
 - Template for solution

Jan 29, 2021

Sprenkle - CSCI111

9

9

Design Patterns

- General, repeatable solution to a commonly occurring problem in software design
 - Template for solution

- Example (Standard Algorithm)

- Get input from user
- Do some computation
- Display output

Jan 29, 2021

Sprenkle - CSCI111

10

10

Programming Paradigm: Imperative

- Most modern programming languages are **imperative**
- Have **data** (numbers and strings in variables)
- Perform **operations** on data using operations, such as + (addition and concatenation)
- Data and operations are separate

- Add to imperative:
object-oriented programming

Jan 29, 2021

Sprenkle - CSCI111

11

11

OBJECT-ORIENTED PROGRAMMING

Jan 29, 2021

Sprenkle - CSCI111

12

12

Object-Oriented Programming

- Program is a collection of **objects**
- Objects **combine** data and methods together
- Objects interact by invoking **methods** on other objects
 - Methods perform some operation on object

Jan 29, 2021

Sprenkle - CSCI111

13

13

Object-Oriented Programming

- Program is a collection of **objects**
- Objects **combine** data and methods together
- Objects interact by invoking **methods** on other objects
 - Methods perform some operation on object

Jan 29, 2021

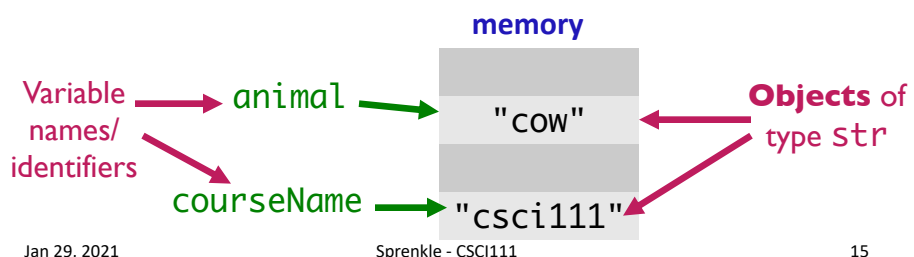

Sprenkle - CSCI111

14

14

Object-Oriented Programming

- We've been using objects
 - Just didn't call them objects
- For example: **str** is a data type (or **class**)
 - We created **objects** of type (class) **string**
 - `animal = "cow"`
 - `courseName = "csci111"`

Jan 29, 2021

Sprenkle - CSCI111

15

15

Example of OO Programming Abstraction

- Think of a smart phone— It's an **object**
- What can you do to a phone?

Jan 29, 2021

Sprenkle - CSCI111

16

16

Example of OO Programming Abstraction

- Think of a phone– it's an **object**
- What can you do to a phone? Those are **methods**
 - Turn it on/off
 - Open applications
 - Make a phone call
 - Mute it
 - Update settings
 - ...
- You don't know **how** that operation is being done (i.e., implemented)
 - Just know **what it does** and that it **works**

Jan 29, 2021

Sprenkle - CSCI111

17

17

Example of OO Programming Abstraction

- A smart phone is an **object**
- **Methods** you can call on your smart phone:
 - Turn it on/off
 - Open applications
 - Make a phone call
 - Mute it
 - Update settings
 - ...
- **SmartPhone** is a **class**, a.k.a., a data **type**
 - My smart phone (identified by myPhone) is an object of type SmartPhone
 - You can call the above methods on any object of type SmartPhone

Jan 29, 2021

Sprenkle - CSCI111

18

18

Object-Oriented Programming

- Objects combine **data and methods** together

Provides **interface (methods)** that users interact with

Use an **Application Programming Interface (API)** to interact with a set of classes.

Jan 29, 2021

Sprenkle - CSCI111

19

19

Class Libraries

- Python provides libraries of classes
 - Defines methods that you can call on objects from those classes
 - **str** class provides a bunch of useful methods
 - More on that later
- Third-party libraries
 - Written by non-Python people
 - Can write programs using these libraries too

Jan 29, 2021

Sprenkle - CSCI111

20

20

Using a Graphics Module/Library

- Allows us to handle graphical input and output
 - Example output: Pictures
 - Example input: Mouse clicks
 - Defines a collection of related graphics **classes**
 - Not part of a standard Python distribution
 - Need to **import** from `graphics.py`
-  Use the library to help us learn object-oriented (OO) programming

Jan 29, 2021

Sprenkle - CSCI111

21

21

USING A GRAPHICS MODULE

Jan 29, 2021

Sprenkle - CSCI111

22

22

Using a Graphics Module/Library

- Handout lists the various classes
 - **Constructor** is in bold
 - Creates an object of that type
 - For each class, lists *some* of their methods and parameters
 - Drawn objects have some common methods
 - Listed at end of handout
- Known as an **API**
 - **Application Programming Interface**

Jan 29, 2021

Sprenkle - CSCI111

23

23

Example of Output

Jan 29, 2021

Sprenkle - CSCI111

24

24

Using the Graphics Library

- In general, graphics are drawn on a canvas
 - A canvas is a 2-dimensional grid of pixels
- For our Graphics library, our canvas is a *window*
 - Specifically an **instance** of the `GraphWin` class
 - By default, a `GraphWin` object is 200x200 pixels

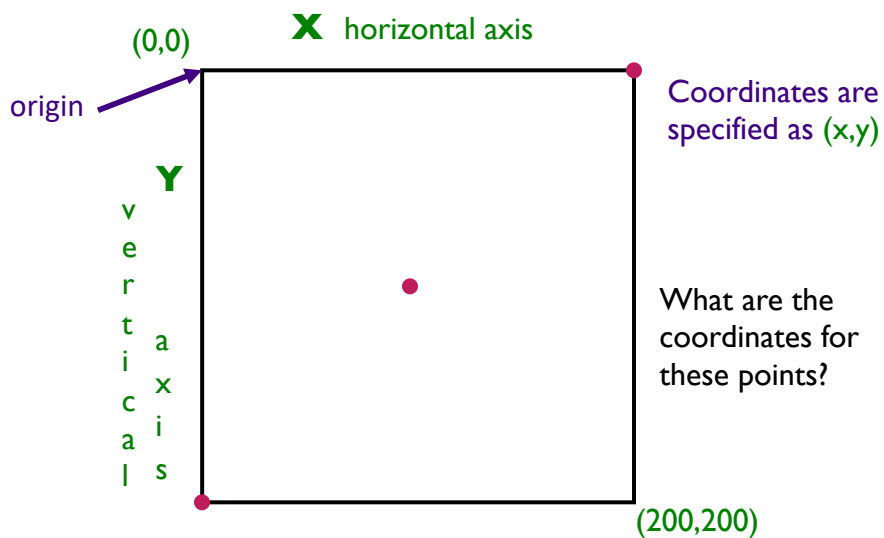

Jan 29, 2021

Sprenkle - CSCI111

25

25

A GraphWin Object's Canvas

Jan 29, 2021

Sprenkle - CSCI111

26

26

A GraphWin Object's Canvas

27

Using the API: Constructors

- To create an object of a certain type/class, use the **constructor** for that type/class

➤ Syntax:

```
objName = ClassName([parameters])
```

➤ Note:

- Class names typically begin with capital letter
- Object names begin with lowercase letter

➤ **objname** is known as an **instance** of the class

- Example: To create a GraphWin object that's identified by window

```
window = GraphWin("My Window",200,200)
```

Jan 29, 2021

Sprenkle - CSCI111

28

28

The GraphWin Class

- All parameters to the **constructor** are optional
- Could call constructor as

Call	Meaning
GraphWin()	Title, width, height to defaults ("Graphics Window", 200, 200)
GraphWin(<title>)	Width, height to defaults
GraphWin(<title>, <width>)	Height to default
GraphWin(<title>, <width>, <height>)	

Jan 29, 2021

Sprenkle - CSCI111

29

29

Using the API: Methods

- To call a **method** on an object,
 - Syntax:

```
objName.methodName([parameters])
```
 - Method names typically begin with lowercase letter
 - Similar to calling *functions*
- Example: To change the background color of a GraphWin object named `window`

```
window.setBackground("blue")
```

Jan 29, 2021

Sprenkle - CSCI111

30

30

Using the API: Methods

- A method sometimes **returns output**, which you may want to save in a variable
 - Class's API should say if method returns output
 - Referred to as an ***accessor***
- Example: if you want to know the *width* of a GraphWin object named window

```
width = window.getWidth()
```

Jan 29, 2021

Sprenkle - CSCI111

31

31

The GraphWin API

- **Accessor** methods for GraphWin
 - Return some information about the GraphWin
- Example methods:
 - <GraphWinObj>.getWidth()
 - <GraphWinObj>.getHeight()

Jan 29, 2021

Sprenkle - CSCI111

32

32

The GraphWin API

- `<GraphWinObj>.setBackground(<color>)`
 - Colors are strings, such as "red" or "purple"
 - Can add numbers to end of string for darker colors, e.g., "red2", "red3", "red4"

```
win = GraphWin()  
win.setBackground("purple")
```

- Does *not* return anything to shell
- Called for change in `win`'s state, i.e., this method is a **mutator**

Jan 29, 2021

Sprenkle - CSCI111

33

33

General Categories of Methods

- Accessor
 - Returns information about the object
 - Example: `getWidth()`
- Mutator
 - Changes the state of the object
 - i.e., changes something about the object
 - Example: `setBackground()`

Jan 29, 2021

Sprenkle - CSCI111

34

34

What Does This Code Do?

1. Identify examples of the OO terminology in this code: class, objects, methods, constructors
2. Describe the output from this code

```
from graphics import *  
  
win = GraphWin("My Circle", 200, 200)  
point = Point(100,100)  
c = Circle(point, 10)  
c.draw(win)  
win.getMouse()
```

graphics_test.py

Jan 29, 2021

Sprenkle - CSCI111

35

35

What Does This Code Do?

Need to import the code from graphics.py into our program

```
from graphics import *  
  
win = GraphWin("My Circle", 200, 200)  
point = Point(100, 100)  
c = Circle(point, 10)  
c.draw(win)  
win.getMouse()
```

GraphWin object
Also known as an **instance of the GraphWin class**

Constructor

Method called on GraphWin object

Note: Class names start with capital letters,
Method names start with lowercase letters

Jan 29, 2021

36

Benefits of Object-Oriented Programming

- **Abstraction**
 - Hides details of underlying implementation
 - Easier to change implementation
- Easy reuse of code
 - Can import the library in multiple files
- Collects related data/methods together
 - Easier to reason about data
- Less code in main program
 - Our program code is relatively simple

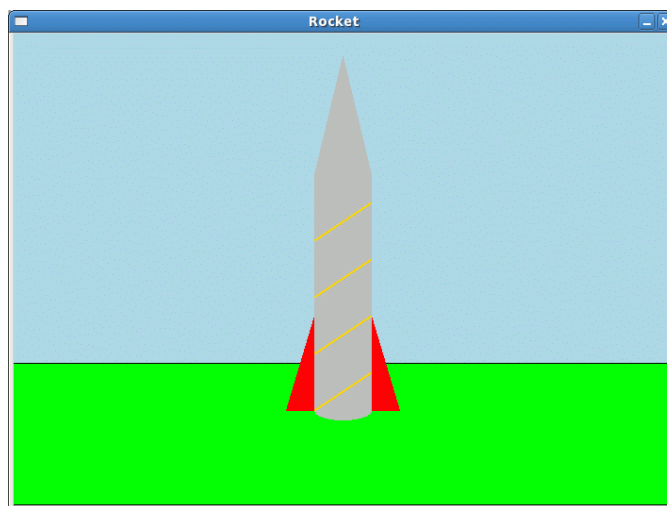

Jan 29, 2021

Sprenkle - CSCI111

37

37

What objects make up this image?

Jan 29, 2021

Sprenkle - CSCI111

38

38

Colors

- Strings, such as "blue4"
- Can also create colors using the *function* `color_rgb(<red>, <green>, <blue>)`
 - Parameters in the range [0,255]
 - Example use:

```
darkBlueGreen = color_rgb(10, 100, 100)
win.setBackground(darkBlueGreen)
```

 - Background is a dark blue/green color
 - Example color codes:
 - http://en.wikipedia.org/wiki/List_of_colors

Sprenkle - CSCI111

39

39

OO Terminology Summary

Term	Definition	Examples
Class	A data type. Defines the data and operations for members of the class	str, SmartPhone, GraphWin
Object	An <i>instance</i> of a specific class	animal, myPhone, window
Method	Operations you can call on an object	setBackground(<color>), getWidth()
Constructor	Special method to create an object of a certain type/class	GraphWin(), str(1234)
