

Objectives

- String Formatting
- Data Representations, continued

Mar 8, 2021

Sprenkle - CSCI111

1

1

Review

- What is the special name for sequences, like newlines, tabs, ...?
 - How do we represent them in strings?
- How does the computer represent data (e.g., numbers and text)?
- What are the various things we can do with strings?

Mar 8, 2021

Sprenkle - CSCI111

2

2

FORMATTING STRINGS

Mar 8, 2021

Sprenkle - CSCI111

3

3

Formatting Strings: format Method

- How to use:
 - `"templatestring".format(<replacementvalues>)`
- Semantics: returns a **formatted string**
 - Means “format the `templatestring`, using the `format(s)` specified by **format specifiers** on the corresponding replacement values”
 - Returned as the **str** data type
- Typically used with print statements

Mar 8, 2021

Sprenkle - CSCI111

4

4

Formatting Strings: format Method

- How to use:
 - "templatestring".format(<replacementvalues>)
- `templatestring` allows us to control how output is displayed to user
 - Right, left justification
 - Number of decimals to display

Mar 8, 2021

Sprenkle - CSCI111

5

5

Formatting Strings: format Method

- `templatestring` is a template for the resulting string with *format specifiers* instead of the values
 - For each format specifier in `templatestring`, need a corresponding **replacement value**

➤ Example:

```
"{: .2f} ".format(3.14159) Evaluates to "3.14"
```

↑
One format specifier
in template string

↑
Corresponding replacement value

- Throws **IndexError** if not enough replacements for specifiers in `templatestring`

Mar 8, 2021

Sprenkle - CSCI111

6

6

Format Specifiers

[] mean optional

- General format:
`{[field_name]:conversion}`

 index number of the argument,
i.e., which field in the template string

- conversion

➤ conversion code of the data type

Code	Type
s	string
d	integer
f	float
e	floating point with exponent

Default if code isn't given

(There are more...)

Mar 8, 2021

Sprenkle - CSCI111

7

7

Format Specifiers

[] mean optional

Conversion options :[flags][width][.precision][code]

- flags:

Flag	Meaning
<	Left-justification • Default for strings
>	Right-justification • Default for numbers
^	Centered
0	Zero fills
+	Adds a + sign before positive values

- width:

- *Minimum* number of character spaces reserved to display the entire value
- Includes decimal point, digits before and after the decimal point and the sign

- precision:

- Number of digits after the decimal point for **floating point** values

Mar 8, 2021

Sprenkle - CSCI111

8

8

Example using Format Operator

Format specifier

```
print("Your item that cost ${:.2f}".format(value))  
print("costs ${:.2f} with tax".format(tax))
```

Alternative:

```
print("Your item that cost ${:.2f} costs ${:.2f} with tax".format(value, tax))
```

sales_tax2.py

Mar 8, 2021

Sprenkle - CSCI111

9

9

Example Format Specifiers

```
"{:5d}".format(12)    "{:9.2f}".format(23.1999)
```

→ " 12"

→ " 23.20"

Field width is 5

Precision is 2

Right-justified

Field width is 9

- What if precision is bigger than the decimal places?
- What if field width is smaller than the length of the value?

Any guesses? Try out in interpreter.

Mar 8, 2021

Sprenkle - CSCI111

10

10

Example Format Specifiers

`"{:5d}".format(12)` `"{:9.2f}".format(23.1999)`

→ " 12"

→ " 23.20"

Field width is 5

Precision is 2

Right-justified

Field width is 9

- What if precision is bigger than the decimal places?
 - Fills decimal with 0s
- What if field width is smaller than the length of the value?
 - String contains entire value

Mar 8, 2021

Sprenkle - CSCI111

11

11

Formatting Practice

- `x = 10`
- `y = 3.5`
- `z = "apple"`
- `"{:6d}".format(x)`
- `"{:6.2f}".format(x)`
- `"{:6.2f}".format(y)`
- `"{:06.2f}".format(y)`
- `"{: ^11s}".format(z)`
- `"{:5d} {:<7.3f}".format(x,y)`

Mar 8, 2021

Sprenkle - CSCI111

12

12

Example: Printing Out Tables

- A table of temperature conversions

Temp F	Temp C	Temp K
-459.7	-273.1	0.0
0.0	-17.8	255.2
32.0	0.0	273.1

- If we want to print data in rows, what is the template for what a row looks like?
 - How do we make the column labels line up?

Mar 8, 2021

Sprenkle - CSCI111

`temp_table.py`

13

13

String Formatting

- There are a lot more things you can do with string formatting
- Presenting just a subset of the most commonly used functionality
- When formatting strings, consider
 - What is the data type of your data?
 - If a float, how many decimal places do you want?
 - How wide do you want the data to be?
 - What justification? Zero fill? Other flags?

Mar 8, 2021

Sprenkle - CSCI111

14

14

String Representations

- A **string** is a *sequence* of characters
- Each character is stored as a binary number
- **ASCII** (American Standard Code for Information Interchange) is one standard encoding for characters
 - Limitation: ASCII is based on the English language
 - Cannot represent other types of characters
 - Handout is just a subset
- Unicode is a new standard

Mar 8, 2021

Sprenkle - CSCI111

ASCII Table Handout

15

15

Translating to/from ASCII

- Translate a character into its ASCII numeric code using **built-in function ord**
 - `ord('a')` ==> 97
- Translate an ASCII numeric code into its character using **built-in function chr**
 - `chr(97)` ==> 'a'

Mar 8, 2021

Sprenkle - CSCI111

ascii_table.py
ascii.py

16

16

ASCII Questions

- Lowercase letters are represented by what range of numbers?
- Uppercase letters are represented by what range of numbers?
- What is the difference between the decimal encoding of 'M' and 'N'?
 - Between 'm' and 'n'?
- Explain the result of "Zebra" < "aardvarks" being True

Mar 8, 2021

Sprenkle - CSCI111

17

17

ASCII Questions

- Lowercase letters are represented by what range of numbers?
 - 97–122
- Uppercase letters are represented by what range of numbers?
 - 65–90
- What is the difference between the decimal encoding of 'M' and 'N'?
 - Between 'm' and 'n'?
 - 1
- Explain the result of "Zebra" < "aardvarks" being True
 - ord("Z") < ord("a")

Mar 8, 2021

Sprenkle - CSCI111

18

18

Translating to/from ASCII

- Translate a character into its ASCII numeric code using **built-in function** `ord`
 - `ord('a')` ==> 97
- Translate an ASCII numeric code into its character using **built-in function** `chr`
 - `chr(97)` ==> 'a'

Mar 8, 2021

Sprenkle - CSCI111

`ascii_table.py`
`ascii.py`

19

19

Encryption

- Process of encoding information to keep it secure
- One technique: Substitution Cipher
 - Each character in message is replaced by a new character

Mar 8, 2021

Sprenkle - CSCI111

20

20

Caesar Cipher

- Replace character with a character X places away
 - X is called the **key**
- Julius Caesar used technique to communicate with his generals
- “Wrap around” within the lowercase letters
- Write program(s) to do this in next lab

Mar 8, 2021

Sprenkle - CSCI111

21

21

Caesar Cipher

- Using the ASCII handout, what would be the encoded messages?

Message	Key	Encoded Message
apple	5	
zebra	5	
the eagle flies at midnight	-5	

Mar 8, 2021

Sprenkle - CSCI111

22

22

Caesar Cipher

Message	Key	Encoded Message
apple	5	fuuqj
zebra	5	ejgwf
the eagle flies at midnight	-5	ocz zvbgz agdzn vo hdyidbco

What is your algorithm for the encoding process?
How would you *decode* an encrypted message?

Mar 8, 2021

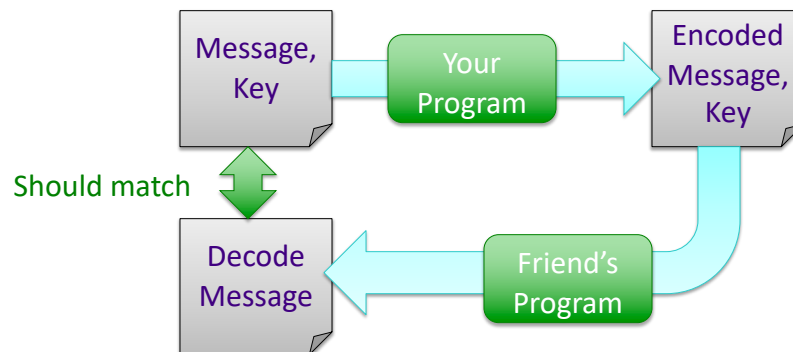

Sprenkle - CSCI111

23

23

Next Lab

- Write an encoding/decoding program
 - Encode a message
 - Give to a friend to decode

Mar 8, 2021

Sprenkle - CSCI111

24

24

Caesar Cipher: translateLetter

- Given a letter and key
- Convert the character to its ASCII value
- Add the key to that value
- Make sure that the new value is a “valid” ASCII value, i.e., that that new value is in the range of lowercase letter ASCII values
 - If not, “wrap around” to adjust that value so that it’s in the valid range
- Convert the ASCII value into a character
- Return the letter

Mar 8, 2021

Sprenkle - CSCI111

25

25

Caesar Cipher (Partial) Algorithm

- Given a message and key
- For each character in the message
 - Check if the character is a space; if it is, it stays a space
 - Otherwise
 - Translate Letter
- Return the message

Mar 8, 2021

Sprenkle - CSCI111

26

26

Looking Ahead

- Lab 7 prep
 - Assignment: Repeat the section on string methods, which includes the subsection on format method
 - Think about how to implement the Caesar Cipher
- Lab 7
- Broader Issue: Cryptocurrency
