

## Objectives

- Computer Science is Complexity Science
- Course logistics
- BI: Facebook
- Review for Final

1

## Review

- What is recursion?
  - Provide an example of solving a problem recursively
- What are characteristics of programming languages?
- What are common constructs in programming languages?
- What are some differences between programming languages?

2

## Review: Recursive Binary Search

```
def search(searchlist, key):  
    if len(searchlist) == 0:  
        return -1  
    mid = len(searchlist)//2  
    if searchlist[mid] == key:  
        return mid  
    elif key > searchlist[mid]:  
        # look in upper half  
        return search( searchlist[mid+1:], key )  
    else:  
        # look in lower half  
        return search( searchlist[:mid], key )
```

← Base case: We know the key is not in our list

← Recursion

← Recursion

Sprenkle - CSCI111

3

3

## Review: Recursion Summary

- **Recursion**: method of solving problems
  - Break a problem down into smaller subproblems until problem is small enough that it can be solved trivially
- Binary Search:
  - Break problem to ~half the size of original problem
  - Base cases: when the middle element is what you're looking for; when there are no elements in your list
- Any recursive problem can be solved iteratively
  - Some problems lend themselves better to recursive solutions

Apr 6, 2022

Sprenkle - CSCI111

4

4

## Review: Programming Language Characteristics

- **Syntax:** symbols used
- **Semantics:** what the symbols *mean*

Apr 6, 2022

Sprenkle - CSCI111

5

5

## Review: What is Computer Science?

“Computer Science is no more about computers than astronomy is about telescopes.”

--Edsger Dijkstra

Apr 8, 2022

Sprenkle - CSCI111

6

6

A human must turn information into intelligence or knowledge.  
We've tended to forget that  
**no computer will ever ask a new question.**  
-- Grace Hopper

Computers are incredibly fast, accurate, and stupid.  
Human beings are incredibly slow, inaccurate, and brilliant.  
Together they are powerful beyond imagination.  
-- Albert Einstein

## Review: What This Course Is About

**Problem Solving!**

From  
*30 Rock*

# Review: Parts of an Algorithm

- Input, Output
- Primitive operations
  - What data you have, what you can do to the data
- Naming
  - Identify things we're using
- Sequence of operations
- Conditionals
  - Handle special cases
- Repetition/Loops
- Subroutines
  - Call, reuse similar techniques

*An overview for the semester!*

## COMPLEXITY SCIENCE

Apr 8, 2022

Sprenkle - CSCI111

10

10

# CS == Complexity Science

- How can it be done?
  - Based on **information**
  - Managing, manipulating data
  - Possible algorithms
- How well can it be done?
  - Most **efficient** algorithm in terms of time and/or space
- Can it be done at all?
  - Often, proof is a program--an implementation of the above

# Computer Science Fields

## Systems

- Architecture
- Operating systems
- Networks
- Distributed and parallel systems
- Databases
- Security
- ...

## Software

- Compilers
- Graphics
- Software engineering
- Software testing and verification
- ...

## Theory

- Algorithms
- Theory of computation
- ...

## Other

- Artificial intelligence
- Robotics
- Natural language processing
- Bioinformatics
- Visualization
- Numerical analysis
- ...

- Often research involves combinations of these fields
- Not just programming!
  - But programming is a tool to do much, much more!

14

## Where Can You Go from Here?

Apr 8, 2022

Sprenkle - CSCI111

15

15

## Course Conclusions

- Better [computational] problem solver
- See impact of computer science on your life
  - Think differently about issues
- Understand some computing issues better
  - Taking out some of the mystery
  - Testing, debugging, efficiency
- Algorithms are everywhere
  - Process for solving problems, **efficiently**
  - Mapping human intuition to systematic/automatic process

Apr 8, 2022

Sprenkle - CSCI111

16

16

## Final: Broader Issues

- Take-home (untimed, open articles) part on Broader Issues
  - Submit PDF on Canvas by Finals Friday at noon
- 20 points of the final exam
  - Exam is worth 220 points

Apr 8, 2022

Sprenkle - CSCI111

17

17

## Final: The Rest

- Timed part on Canvas
- Only open brain, Canvas, Word
- Closed everything else
  - Turn off notifications, hide distractions
- Can have paper for scratchwork
- Some questions “in” Canvas
- Some questions in a Word document

Apr 8, 2022

Sprenkle - CSCI111

18

18

## Final: Word Part

- One question in Canvas has the Word document
- Download document, type your answers in document
  - I only left a few lines between questions
  - Write your answer below/between the questions
  - Use the point amount to help gauge how much to write
  - Be careful about autocorrect (e.g., avoid  $i$  as a variable)
- Submit Word document

Apr 8, 2022

Sprenkle - CSCI111

19

19

## Final Exam Review

- Focus on object-oriented programming
- New content: search techniques, lists (1D and 2D), complexity science
- Cumulative:
  - Functions, data types, common methods & operations
  - How to model data

Your questions?

Apr 8, 2022

Sprenkle - CSCI111

20

20

# Course Evaluations

- On Canvas, due Monday
- Incentive
  - If 60% of students complete evaluation, 1% Extra Credit on lab grades
  - For each additional 10% of students who complete evaluation, 1% additional EC on *lab* grades
  - Total possible EC: 5%

Apr 8, 2022

21

# Extra Credit Opportunity

**Professor Matthews Presents**  
**Game Demo Day!**

The CSCI 319 Video Game Design students will be showcasing their final games!

**Where:** Science Center  
Great Hall

**When:** Saturday, April 9th  
10:30am-12:30pm

**Who:** Everyone is welcome!  
Come play video games!

Apr 8, 2022

Sprenkle - CSCI111

22

22

Evaluate up to 2 games for up to 10 points Extra Credit towards labs

- On Canvas
- Submit image of feedback card or complete questionnaire

## Broader Issue: Facebook

Declan Jenna Lakpa Mary Patrick	Amanda Cassandra Han Mac Renan	Ellie Ford Jack Shelby	Aiden Cole Matt Nick
---	--	---------------------------------	-------------------------------

Apr 8, 2022

Sprenkle - CSCI111

23

23

## Broader Issue: Facebook News Feed

- How does Facebook's News Feed work?
  - How is the problem broken down?
  - What is its scale?
  - Is it what you expected?
- React to the statement, "In a large complex system like this, bugs are inevitable and understandable"
- What is the future of social network sites and their algorithms?

Apr 8, 2022

Sprenkle - CSCI111

24

24

## Final Exam Review

- What is our process for developing classes?
- What are the different ways to iterate through a list?
- How do you iterate through a dictionary?

Apr 8, 2022

Sprenkle - CSCI111

25

25

## Animal Shelter Software

- We want to keep track of animals at an animal shelter

What is our process for developing a class?

Apr 8, 2022

Sprenkle - CSCI111

26

26

## Process

- Determine data, functionality
- Create class
  - Create `__init__`, `__str__` methods
- Test
- Create additional methods, test

Apr 8, 2022

Sprenkle - CSCI111

27

27

## Class: Pet

- Data:
  - Species of animal (dog, cat, chinchilla)
  - Name
    - Defaults to ""
  - Status (in holding, in adoption room, adopted)
    - Defaults to "in holding"
- Functionality
  - Constructor: `Pet(species)`
  - String format: `"species: name, status"`
  - Setters for name
  - Set animal as adopted or in adoption room
  - Getters for this information

Apr 8, 2022

Sprenkle - CSCI111

28

28

# Counter Class Specification

- Implement, Test
- Example use: Caesar cipher

- A class that represents a counter that wraps around from a high value back to its low value
- Functionality:
  - Constructor – takes as parameters the low value and the high value
    - counter starts at low value
  - A string representation of the Counter
    - e.g., “low: <low> high: <high> current: <current>”
  - Increment the counter by a given amount (a positive amount), wrapping around to low again, if necessary. Returns number of times had to wrap around.
  - Decrement the counter by a given amount (a positive number), wrapping around to high again, if necessary. Returns number of times had to wrap around.
  - Sets the counter's value, only if  $low \leq value \leq high$ . Otherwise, prints an error message.
  - Getters: low, high, current value

Apr 8, 2022

Sprenkle - CSCI111

29

29

# Palindrome

- Write a program that determines if a string (input by a user) is a palindrome. A *palindrome* is a word that is the same forwards and backwards. Some example palindromes: "kayak", "A man A plan A canal Panama".
- [http://www.fun-with-words.com/palin\\_example.html](http://www.fun-with-words.com/palin_example.html)
- Break the problem into at least two functions:
  - main
  - isPalindrome, which returns True iff the parameter string passed into the function is a palindrome.
- Depending on how you think about the problem, you may want to break the solution into more functions, e.g., a reverseString function
