

Objectives

- Introduction to Object-Oriented Programming
- Introduction to APIs

1

Review

- How do we get input from a user?
 - Give example of getting input from a user, one where we want a string and one where we want a number
- What is the testing process? What is our goal in testing?

2

Review: Getting Input From User

- `input` is a *function*
 - **Function:** A command to do something
 - A “subroutine”
 - Syntax:
 - `input(<string_prompt>)`
 - Semantics:
 - Display the prompt `<string_prompt>` in the terminal
 - Read in the user’s input and *return* it as a string/text

Jan 23, 2023

Sprenkle - CSC1111

3

3

Review: Getting Input From a User

- Save the result of calling `input` in a variable
 - Ex:

```
color = input("What is your favorite color? ")
```
- If you want the assigned variable to be of type `int` or `float`, we need to convert the result of calling `input`

➤ Ex:

```
height = eval(input("Enter the height: "))  
width = float(input("Enter the width: "))
```

Tradeoffs in which approach to use. For another time...

Jan 23, 2023

Sprenkle - CSC1111

4

4

Review: Testing Process

- Test case:
 - Input used to test the program
 - Expected output given that input
- Verify if output is what you expected
- Goal: create *good* test cases that will reveal if there is a problem in your code

If output is not what you expect, debug!

Jan 23, 2023

5

Programming Paradigm: Imperative

- Most modern programming languages are **imperative**
- Have **data** (numbers and strings in variables)
- Perform **operations** on data using operations, such as + (addition and concatenation)
- Data and operations are separate

- Add to imperative: **object-oriented programming**

Sprenkle - CSC1111

6

6

OBJECT-ORIENTED PROGRAMMING

Jan 23, 2023

Sprenkle - CSC1111

7

7

Object-Oriented Programming

- Program is a collection of **objects**
- Objects **combine** data and methods together
- Objects interact by invoking **methods** on other objects
 - Methods perform some operation on object

Jan 23, 2023

Sprenkle - CSC1111

8

8

Object-Oriented Programming

- Program is a collection of **objects**
- Objects **combine** data and methods together
- Objects interact by invoking **methods** on other objects
 - Methods perform some operation on object

Jan 23, 2023

Sprenkle - CSC1111

9

9

Object-Oriented Programming

- We've been using objects--just didn't call them objects
- For example: **str** is a data type (or **class**)
 - We created **objects** of type (**class**) **string**

- `animal = "cow"`
- `courseName = "csci111"`

Jan 23, 2023

Sprenkle - CSC1111

10

10

Example of OO Programming Abstraction

- Think of a smart phone– It's an **object**
- What can you do to a phone?

Jan 23, 2023

Sprenkle - CSC1111

11

11

Example of OO Programming Abstraction

- Think of a phone– it's an **object**
- What can you do to a phone? Those are **methods**
 - Turn it on/off
 - Open applications
 - Make a phone call
 - Mute it
 - Update settings
 - ...
- You don't know **how** that operation is being done (i.e., implemented)
 - Just know **what it does** and that it **works**

Jan 23, 2023

Sprenkle - CSC1111

12

12

Example of OO Programming Abstraction

- A smart phone is an **object**
- **Methods** you can call on your smart phone:
 - Turn it on/off
 - Open applications
 - Make a phone call
 - Mute it
 - Update settings
 - ...
- **SmartPhone** is a **class**, a.k.a., a data **type**
 - My smart phone (identified by `myPhone`) is an object of type `SmartPhone`
 - Call the above methods on any object of type `SmartPhone`

Jan 23, 2023

Sprenkle - CSC1111

13

13

Object-Oriented Programming

- Objects combine **data and methods** together

Provides **interface** (*methods*) that users interact with

Hides internal data structures, implementation

Object `o` of type `X`

`o.method()`

Optionally may return something back

Use an **Application Programming Interface (API)** to interact with a set of classes.

Jan 23, 2023

Sprenkle - CSC1111

14

14

Class Libraries

- Python provides libraries of classes
 - Defines methods that you can call on objects from those classes
 - `str` class provides a bunch of useful methods
 - More on that later
- Third-party libraries
 - Written by non-Python people
 - Can write programs using these libraries too

Jan 23, 2023

Sprenkle - CSC1111

15

15

Using a Graphics Module/Library

- Allows us to handle graphical input and output
 - Example output: Pictures
 - Example input: Mouse clicks
- Defines a collection of related graphics **classes**
- Not part of a standard Python distribution
- ➔ Need to **import** from `graphics.py`
- Use the library to help us learn object-oriented (**OO**) programming

Jan 23, 2023

Sprenkle - CSC1111

16

16

USING A GRAPHICS MODULE

Jan 23, 2023

Sprenkle - CSC1111

17

17

Using a Graphics Module/Library

- Handout lists the various classes
 - **Constructor** is in bold
 - Creates an object of that type
 - For each class, lists *some* of their methods and parameters
 - Drawn objects have some common methods
 - Listed at end of handout
- Known as an **API**
 - **Application Programming Interface**

Jan 23, 2023

Sprenkle - CSC1111

18

18

Example of Output

Jan 23, 2023

Sprenkle - CSC1111

19

19

Using the Graphics Library

- In general, graphics are drawn on a canvas
 - A canvas is a 2-dimensional grid of pixels
- For our Graphics library, our canvas is a *window*
 - Specifically an **instance of the GraphWin** class
 - By default, a GraphWin object is 200x200 pixels

Jan 23, 2023

Sprenkle - CSC1111

20

20

A GraphWin Object's Canvas

21

A GraphWin Object's Canvas

22

Using the API: Constructors

- To create an object of a certain type/class, use the **constructor** for that type/class
 - Syntax: `objName = ClassName([parameters])`
 - Semantics: create an object of type `ClassName` with the given parameters and save it in the variable `objName`
 - Note:
 - Class names typically begin with a *capital* letter
 - Object names begin with a lowercase letter
 - **objname** is known as an *instance* of the class `ClassName`
- Example: To create a `GraphWin` object that's identified by `window`

```
window = GraphWin("My Window", 200, 200)
```

Jan 23, 2023

Sprenkle - CSC1111

23

23

The GraphWin API: Constructor

- All parameters to the **constructor** are optional
 - Marked by []
- Could call constructor as

Call	Meaning
<code>GraphWin()</code>	Title, width, height to defaults ("Graphics Window", 200, 200)
<code>GraphWin(<title>)</code>	Width, height to defaults
<code>GraphWin(<title>, <width>)</code>	Height to default
<code>GraphWin(<title>, <width>, <height>)</code>	

Jan 23, 2023

Sprenkle - CSC1111

24

24

Using the API: **Methods**

- To call a **method** on an object,
 - **Syntax:** `objName.methodName([parameters])`
 - **Semantics:** call `methodName` with the given parameters on the object identified by the name `objName`
 - Similar to calling *functions*
- Method names typically begin with lowercase letter
- Example: To change the background color of a GraphWin object named `window`

Jan 23, 2023

```
window.setBackground("blue")
```

25

25

Using the API: **Accessor Methods**

- A method sometimes **returns output**, which you may want to save in a variable
 - Class's API should say if method returns output
 - Referred to as an **accessor method**
- Example: if you want to know the *width* of a GraphWin object named `window`

```
width = window.getWidth()
```

Jan 23, 2023

Sprenkle - CSC111

26

26

The GraphWin API: Accessor Methods

- **Accessor** methods for GraphWin
 - Return some information about the GraphWin
- Example methods:
 - `<GraphWinObj>.getWidth()`
 - `<GraphWinObj>.getHeight()`

Jan 23, 2023

Sprenkle - CSC1111

27

27

The GraphWin API: Mutator Methods

- **Mutator** methods: methods that change or *mutate* an object/its state but don't return anything
- Example: `<GraphWinObj>.setBackground(<color>)`
 - Colors are strings, such as "red" or "purple"
 - Can add numbers to end of string for darker colors, e.g., "red2", "red3", "red4"
 - Changes `win`'s state but does *not return* anything to shell
 - Don't save method call in a variable

```
win = GraphWin()  
win.setBackground("purple")
```

Jan 23, 2023

Sprenkle - CSC1111

28

28

Summary: General Categories of Methods

Accessor

- Returns information about the object
- Example use – save method call's output in a variable:
`windowWidth = win.getWidth()`

Mutator

- Changes the state of the object
 - i.e., changes something about the object
- Example use:
`win.setBackground("blue")`

Jan 23, 2023

Sprenkle - CSC1111

29

29

What Does This Code Do?

1. Identify examples of the OO terminology in this code:
class, objects, methods, constructors
2. Describe the output from this code

```
from graphics import *  
  
win = GraphWin("My Circle", 200, 200)  
point = Point(100,100)  
c = Circle(point, 10)  
c.draw(win)  
win.getMouse()
```

Jan 23, 2023

Sprenkle - CSC1111

graphics_test.py

30

30

What Does This Code Do?

Need to import the code from graphics.py into our program

```
from graphics import *  
  
win = GraphWin("My Circle", 200, 200)  
point = Point(100, 100)  
c = Circle(point, 10)  
c.draw(win)  
win.getMouse()
```

GraphWin object
Also known as an **instance of the GraphWin class**

Constructor

Method called on GraphWin object

Note: Class names start with capital letters,
Method names start with lowercase letters

- CSC1111

Typical OOP Programming Process:

1. Create an instance of a class
2. Call methods on that object

31

What objects make up this scene?

Jan 23, 2023

Spenkle - CSC1111

32

32

Colors

- Strings, such as "blue4"
- Can also create colors using the *function* `color_rgb(<red>, <green>, <blue>)`
 - Parameters in the range [0,255]
 - Example use:

```
darkBlueGreen = color_rgb(10, 100, 100)
win.setBackground(darkBlueGreen)
```

 - Background is a dark blue/green color
 - Example color codes:
 - http://en.wikipedia.org/wiki/List_of_colors

Jan 23, 2023

Sprenkle - CSC1111

33

33

Using the Graphics Library

- Create an instance of a Rectangle that is blue and 50x100 pixels in the upper left of the window
- Draw the rectangle
- Shift the instance of the Rectangle class to the **right** 10 pixels
- Find out the x- and y- coordinates of the upper-left corner of the Rectangle now

Jan 23, 2023

Sprenkle - CSC1111

`rectangle.py`

34

34

OO Terminology Summary

Term	Definition	Examples
Class	A data type. Defines the data and operations for members of the class	str, SmartPhone, GraphWin
Object	An instance of a specific class	animal, myPhone, window
Method	Operations you can call on an object	setBackground(<color>), getWidth()
Constructor	Special method to create an object of a certain type/class	GraphWin(), str(1234)

Jan 23, 2023

Sprenkle - CSC1111

35

35

Problem:

Draw a Full-Canvas Tic-Tac-Toe Board

- Using the Graphics API
- Make lines purple with line width 3
- The width and height of the canvas is 200

Jan 23, 2023

Sprenkle - CSC1111

tictactoe.py

36

36

Benefits of Object-Oriented Programming

- **Abstraction**
 - Hides details of underlying implementation
 - Easier to change implementation
- Collects related data/methods together
 - Easier to reason about data
- Less code in main program
 - Our program code is relatively simple

Jan 23, 2023

Sprenkle - CSCI111

37

37

Looking Ahead

- Pre Lab 2 due tomorrow before lab
 - You're going to make "something significant" using the graphics library
- Broader Issue due Thursday at 11:59 p.m.
 - All will be done at that time
 - I won't put the deadline on the Canvas discussion forum because then I can't accept late assignments.
