

Objectives

- Wrap up indefinite loops
- Text processing, manipulation
 - String operations, processing, methods
- Broader Issue: Autonomous Vehicles

1

Review

- How do we write indefinite loops in Python?
 - Why are they called *indefinite* loops?
- What are two ways to think about `while` loops?
 - What questions should you ask and how do the answers inform your solutions to these problems?
- Which are more powerful: `for` loops or `while` loops?
- Think about a solution to the consecutive flips problem (last slide from last time)

2

Flipping Coins

- Problem: How many flips does it take to get 3 consecutive heads?
 - How can we simulate flipping a coin?
- Recap:
 - Have the `game` module
 - `flipCoin()` and constants for HEADS and TAILS
- Now:
 - Write solution using sentinel design pattern
 - write solution using a `while True` loop and `break`

TEXT PROCESSING

Feb 17, 2023

Sprengle - CSCI111

4

4

Motivation: Text Processing

- Mostly focused on numbers so far
 - A little on graphics
- We can manipulate text to do useful work
 - Search: finding most relevant documents to a query
 - Understanding language
 - Analyzing web logs (who is looking at my web page?)
 - Many, many others
- **Today's Focus:** the `str` data type and what you can do with them

Feb 17, 2023

Sprenkle - CSC1111

5

5

Strings: `str`

- Used for text
- Indicated by double quotes `""` or single quotes `"`
 - In general, I'll use double quotes
 - Empty string: `""` or `"`
- Use triple quotes `"""` for strings that go across multiple lines

```
"""This string  
is long.  
Like, really, really long"""
```

6

6

STRING OPERATIONS

Feb 17, 2023

Sprenkle - CSC1111

7

7

String Operations

Operand	Syntax	Meaning
+	<code>str1 + str2</code>	Concatenate two strings into one string
*	<code>str * num</code>	Concatenate string <code>num</code> times

- Examples:

- `"I feel " + "sleepy"`

- Evaluates to `"I feel sleepy"`

- `"Oops! " * 3`

- Evaluates to `"Oops! Oops! Oops! "`

Recall lab 0

8

8

Practice

- Given the following code

```
SCALE_MIN = 1
SCALE_MAX = 10
SUBJECT = "Zendaya"
prompt = # ... your code here
rating = eval(input( prompt ))
```

- Create the `str` variable `prompt` for the `input` statement so that it prompts the user:

On a scale of 1 to 10, how much do you like Zendaya?

9

9

String Comparisons

- Same operations as with numbers:

➤ ==, !=
➤ <, <=
➤ >, >=

} Alphabetical comparison

- Use in conditions, e.g., in `if` statements

```
if courseChoice == "CSCI111":
    print("Good choice!")
else:
    print("Maybe next semester")
```

Broader Issue: Autonomous Vehicles

- Why do I still assign an article from 2007?
- Autonomous Vehicles: love 'em or loathe 'em
 - As a passenger? As a driver (or passenger) in another car? As a pedestrian?
- What are the tradeoffs of autonomous vehicles?
 - What guarantees about the cars would you want from the company/government?
 - Are there situations that would be particularly difficult for software to handle that a person would be better equipped to handle?
 - What about the ethics of tough decisions?
- Consider the development process to create autonomous vehicles
 - What are the steps? What makes it hard?

12

12

Broader Issue: Autonomous Vehicles

- Development Process
 - Writing code
 - Breaking complex problem into smaller pieces
 - Iteration
 - Testing code – safety-critical system
 - Iteration
 - Dealing with changing conditions
 - Emphasis on “soft”, easily changed code
 - Dealing with other systems
 - Need a common API

14

14

Exam 1

- Reflection

- What strategies did you use to study?

- What strategies did you use in the course in general?

- What did you do well on? What did you miss?

- What strategies should you keep? What should change?

- Stats:

	Section			Total
	A	B	C	
Average	86.74	77.17	93.90	91.57
Median	90	79.55	97.56	94.50

Course Grade Overview

- (35%) Programming projects
- (30%) Two hourly exams
- (20%) A comprehensive final exam
- (7%) Writeups and discussions of Broader Issues
- (3%) Interactive textbook – prelabs
- (5%) Participation and attendance
