

Objectives

- Intro to Java
- Basics of Java Syntax
- Java fundamentals
 - Print statements

Sept 13, 2021

Sprenkle - CSCI209

1

1

Weekends

- Sorry responses so short
- Emailing through voice-to-text

Sept 13, 2021

Sprenkle - CSCI209

2

2

Review

- What are qualities of good software?
- What are the benefits of version control?
- What are some of the common Git commands and what do they do?

Sept 13, 2021

Sprenkle - CSCI209

Purpose of questions?

3

3

Git Notes

- Typical Git workflow
 1. Branch from `main` to a work-in-progress branch
 2. Work on feature/next step/...
 3. When complete, merge branch back into `main`
 - Optionally, push `main`
 4. Switch back to and continue in work-in-progress branch
 5. Repeat
- Typically, only push `main` branch
 - won't push your work-in-progress branches unless need debugging help

Sept 13, 2021

Sprenkle - CSCI209

4

4

Why the Command Line?

- Because you *should* know it
 - Alumni feedback
- It can make your development process quicker
 - After you get used to it
- Because you look so badass using it

Sept 13, 2021

Sprenkle - CSCI209

5

5

Suggestion

- Reload assignment pages whenever you return to them
 - Get most recent updates
 - I may have addressed issues that students alerted me to

Sept 13, 2021

Sprenkle - CSCI209

6

6

INTRODUCTION TO JAVA

Sept 13, 2021

Sprenkle - CSCI209

7

7

What is Java?

... and, why should I learn it?

- From Sun Microsystems
 - 1995, James Gosling and Patrick Naughton
 - Specifications
- Object-oriented
- Rich and **large** library
- Develop cross-platform applications
 - Web, desktop, embedded
- Widely used
 - Frameworks to enable easier development

ORACLE®

<http://www.tiobe.com/tiobe-index/>

Sept 13, 2021

Sprenkle - CSCI209

8

8

What is Java?

- Java Programming Language
- Java Virtual Machine
- Java Class Libraries

Sept 13, 2021

Sprenkle - CSCI209

9

9

Overview: Compiling, Executing Java Programs

Sept 13, 2021

Sprenkle - CSCI209

10

10

Compiling Java Programs

Step 1:

Sept 13, 2021

Sprenkle - CSCI209

11

11

Executing Java Programs

Step 2:

- Same **bytecode** is executed on each platform
- Don't need to provide the source code

Sept 13, 2021

Sprenkle - CSCI209

12

12

Java Virtual Machine (JVM)

- Emulates the CPU
 - Usually specified in software (rather than hardware)
- Executes the program's **bytecode**
 - Bytecode: virtual machine code
- JVMs available for each Java-supported platform
 - Enables *program portability*
- HotSpot VM
 - Code dynamically compiled to machine code
- Garbage Collection

Sept 13, 2021

Sprenkle - CSCI209

13

13

Traditional (C/C++) Program Execution

- Example: I use my Mac-specific compiler to compile program into a Mac-specific executable
- Limitation: Executable is not portable

How does Java's approach affect distribution of software?

Sept 13, 2021

Sprenkle - CSCI209

14

14

2 - How does software being Java-based affect its distribution?

- Makes it harder because you have to install a JVM on every machine **A**
- Makes it more secure because you don't provide the source code **B**
- Makes it easier because same bytecode can be run on multiple platforms **C**
- Makes it easier because many machines already have Java installed **D**
- None of the above **E**

15

15

Traditional (C/C++) Program Execution

- Example: I use my Mac-specific compiler to compile program into a Mac-specific executable
- Limitation: Executable is not portable

How are (I) Java and (II) the traditional approach the same and different from Python's approach?

Sept 13, 2021

Sprenkle - CSCI209

16

16

Executing Python Programs

1. Syntax validation
 - exit if not valid
2. Translate Python code to Python bytecode
 - Bytecode stored in `__pycache__` directory
3. Python virtual machine execute Python bytecode

Sept 13, 2021

Sprenkle - CSCI209

17

17

Overview: Compiling, Executing Java Programs

Sept 13, 2021

Sprenkle - CSCI209

18

18

JDK: Java Development Kit

- Contains
 - **javac**: Java compiler
 - **java**: Java Virtual Machine
 - Java class libraries

Sept 13, 2021

Sprenkle - CSCI209

19

19

Java Class Libraries

- Pre-defined classes
 - Included with Java Development Kit (JDK) and Java Runtime Environment (JRE)
 - View the available classes online:
<https://docs.oracle.com/en/java/javase/16/docs/api/index.html>
- Similar in purpose to *modules* available for Python

Sept 13, 2021

Sprenkle - CSCI209

20

20

What is Java?

- Java Programming Language
 - Java Class Libraries
- } What this course
is about
- Java Virtual Machine
 - Use the JVM but won't learn about how it works
 - For more information on JVM:
<http://docs.oracle.com/javase/specs/>

Sept 13, 2021

Sprenkle - CSCI209

21

21

Bringing It Together: Benefits of Java

- Rapid development of programs
 - Large library of classes, including GUIs, Enterprise-level applications, Web applications
- Portability
 - Run program on multiple platforms without recompiling
- Compiled
 - Find some errors before execution!
 - Statically typed
 - Can give performance boost by doing optimizations

Sept 13, 2021

Sprenkle - CSCI209

22

22

LET'S PROGRAM!

Sept 13, 2021

Sprenkle - CSCI209

23

23

Python Review

```
# a Python program
def main():
    print("Hello!")

main()
```

What does this program do?

Sept 13, 2021

Sprenkle - CSCI209

24

24

Example Java Program: Hello.java

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

What are your observations about this program?
What can you figure out?

25

Example Java Program

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

- Everything in Java is inside a **class**
 - Java is *entirely* object-oriented*
 - This class is named **Hello**

26

Example Java Program

Blocks of code marked
with { }

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

Defines the class "Hello"

- In general, each Java program file contains **one** class definition*
- Name of the class is name of file
 - E.g., Hello.java

Sept 13, 2021

Sprenkle - CSCI209

27

27

Example Java Program

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

Access Modifier:

controls if other classes can use code in this class

Sept 13, 2021

Sprenkle - CSCI209

28

28

Example Java Program

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

method

- Class contains one *method*: **main**

Example Java Program: **main** Method

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

- Similar to **main** in Python
 - But *must be associated with a class*
- Must take one parameter: an *array* of Strings
 - For *command-line arguments*
- Must be **public static**
- Must be **void**: data type of what method returns (nothing)
- **main** is *automatically* called when program is executed

Example Java Program

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

- Method contains one line of code
 - What do you think it does?

31

Example Java Program: Print Statements

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

- Calls the **println** method on the **System.out** object
- **println** takes one parameter, a **String**
- Displays string on terminal, terminates the line with new line (**\n**) character

32

Example Java Program: Comments

```
/**
 * Our first Java class: displays Hello!
 * @author Sara Sprenkle
 */
public class Hello {
    public static void main(String[] args) {
        //print a message
        System.out.println("Hello!");
    }
}
```

- Comments: `/* */` or `//`
 - `/** */` are special **JavaDoc** comments

Sept 13, 2021

Sprenkle - CSCI209

33

33

Code Style

```
/**
 * Displays "Hello!"
 * @author Sara Sprenkle
 */
```

- **Comments** at top of program
 - Sprenkle CSCI209 requirements:
 - **Must** include your name
 - **Must** include high-level description of program
- Proper **indentation**
 - Similar to Python
 - Everything within pairs of `{}` is indented the same

```
public class Hello {
    public static void main(String[] args) {
        System.out.println("Hello!");
    }
}
```

Sept 13, 2021

34

34

A Note About Comments

- The example code that I provide is often “over” commented
- I’m providing information for you that isn’t needed in your submissions
 - However, if it’s helpful for you, you can keep “over”commenting

Sept 13, 2021

Sprenkle - CSCI209

35

35

What are the Differences?

```
# a Python program
def main():
    print("Hello")

main()
```

```
/**
 * Our first Java class
 * @author Sara Sprenkle
 */
public class Hello {
    public static void main(String[] args) {
        //print a message
        System.out.println("Hello");
    }
}
```

Sept 13, 2021

Sprenkle - CSCI209

36

36

Java vs. Python, so far...

- **Semantics** the same, **syntax** different
 - Blocks of code
 - End statements
- Access modifiers
- Data type declarations
- Class-based programs
- Compiled

We'll see more differences as we go...

Literal Translation to Python Program?

```
/**
 * Our first Java class
 * @author Sara Sprenkle
 */
public class Hello {
    public static void main(String[] args) {
        //print a message
        System.out.println("Hello");
    }
}
```

Translation to Python Program

```
class Hello:  
    """Our first Python class"""  
  
    def __init__(self):  
        # fill in later...  
  
    def main(self):  
        print("Hello")
```

Semi-literal translation

JAVA FUNDAMENTALS

Print Statement

- Syntax:

```
System.out.println(<String>);
System.out.print(<String>);
```

← No newline

- Similar to Python's `file.write()` method
 - Need to combine parameter into one `String` using `'`'s
 - Python's `print` used *commas*
 - More on `String` operations later

Sept 13, 2021

Sprenkle - CSCI209

41

41

String Concatenation

- If a string is concatenated with something that is not a string, the other variable is converted to a string.

```
System.out.println("The answer is " + 42);
```

Note the +

Automatically
converted to a String

Sept 13, 2021

Sprenkle - CSCI209

42

42

Unix Output Redirection: >

- We can redirect output to a file

- For example

```
ls *.java > java_files.out
```

- Above command saves the output from the `ls` command into the file named `java_files.out`

- This is how you will save output from your Java programs initially

- For example

```
java Intro > out
```

Please follow instructions on names in assignments

Sept 13, 2021

43

Policy: Using the Web and Others

- I provide a lot of online resources
- Most of what I ask you to do is similar to my slides or examples
 - Exception: machine/software configuration
- Use my resources first
- Search online/ask someone else as a last resort
 - Need more experience to sort through the results you get in search engine
 - How do you get experience? More practice in CSCI209!

If it's taking more than ~3 minutes to get an answer,
check in with me

Sept 13, 2021

44

44

Looking Ahead

- Register for Text Book
 - Start reading Chapter 1 through 1.4: Lets look at a Java Program
- Complete Assignment 0 by 11:59 p.m. Tuesday
- Official Office Hours: 1-2 p.m.
 - BUT email me and we can Zoom to resolve the git issues
