1

Review: Typical Trajectory of Projects

Nov 17, 2021

Sprenkle - CSCI209

2

2

Review

- What is a design pattern?
 - What design patterns have we discussed?
 - What problems do they solve?
 - What design patterns are used in the Picasso project?
 - (This could vary by team)
- Why do we need to convert the input to postfix?
- What is our git workflow?
- What is a merge conflict? How do you resolve it?

3

Review: Design Pattern

General reusable solution to a commonly occurring problem in software design

- Not a finished design that can be transformed directly into code
- Description or *template* for how to solve a problem that can be used in many different situations
 - “Experience reuse”, rather than code reuse

Dec 6, 2021

Sprenkle - CSCI209

4

4

Merge Conflict

- Occurs when competing changes to the same lines in a file
 - Git doesn't know how to resolve the merge
- Resolving: manually edit the conflicted file to what you want to keep in the merge
 - Stage change, commit and explain your fix
 - Push branch

6

6

Start Thinking About

- Reporting errors to users
 - Currently: in the printed output but users aren't going to see that
 - Helpful errors → translated for users
- Opening a file that contains an expression
- Handling new operations
 - Order of operations
 - Assignment statement
- Functions with multiple arguments, image names
- Extensions

7

7

Project Goals

- Everyone contributes significantly to the project
 - Has at least one part where they can say "I made this!"
- Everyone understands the code and its design
 - All of it. Well, 90% of it, at least at a high level
- Everyone feels valued as a team member

Dec 6, 2021

Sprenkle - CSCI209

8

8

Contributing to the Team

- Always some concern that your grade is based on lines of code written
 - Number of lines of code is not a good indicator of work or quality of code

Dec 6, 2021

Sprenkle - CSCI209

9

9

Tip: Comparing Binary Operators

- Likely need to implement the equals method in various classes (e.g., Addition, Subtraction, ...)
- Stop after you've written two
- Compare the methods
 - Is there a code smell? Refactor!

Dec 6, 2021

Sprenkle - CSCI209

10

10

Tip: Error Handling

- Don't do too much translation too soon
- Can mask *your programming* errors (that aren't user error errors)

Dec 6, 2021

Sprenkle - CSCI209

11

11

Final Implementation: Documentation

- You leave, I'm still here, trying to use [grade] your code
- Documentation
 - Extensions aren't always obvious
 - State in README
- Javadocs: Purpose of Java classes
 - Update comments
 - Auto-generated daily
 - Can be seen on the project web site

Dec 6, 2021

Sprenkle - CSCI209

12

12

Final Implementation: Tagging

- While given code had compiler errors because of using test-driven development, there should be no compilation errors in final, tagged version

Dec 6, 2021

Sprenkle - CSCI209

13

13

Secondary Goals

- You're going to figure out that your final design isn't perfect—maybe not even good!
 - Fix more critical and/or smaller things
 - Refactoring!
 - Note larger things
 - analysis/post-mortem due at end of finals week

Good judgment comes from experience.
How do you get experience?
Bad judgment works every time.

14

14

Final Project: Project Analysis - Individual

- Understand teammates' design/code/parts
 - *At least at a high level*
- Contents: Description, Planning, Status, Code Analysis, Collaboration, Future Work
 - Complete specification online

Dec 6, 2021

Sprenkle - CSCI209

15

15

Project Planning

- Review project specifications
- Make sure you know what tasks are left
 - Intermediate deadline provides some direction, but there are a variety of other tasks that can be implemented.
- Be agile!

16

Looking Ahead

- Wednesday: Course Retrospective
- Friday: Intermediate Deadline, Demo
- Finals Week
 - Thursday: Final Implementation Deadline
 - Friday - noon: Final Analysis
