

## Objectives

- Review: Asymptotic running times
- Classes of running times
- Implementing Gale-Shapley algorithm

### Office hours:

- Today, 2:35-2:55, 5-5:50 p.m.
- Thursday: 1 – 5 p.m.

Faculty Candidate Talk - Today at 4 p.m.

## Review Asymptotic Bounds

- What does  $O(f(n))$  mean?
- How do we know if a function  $\in O(f(n))$ ?
- What are the other bounds we discussed?

## Review: Asymptotic Order of Growth: Upper Bounds

- $T(n)$  is the worst case running time of an algorithm
- We say that  $T(n)$  is  $O(f(n))$  if there exist constants  $c > 0$  and  $n_0 \geq 0$  such that for all  $n \geq n_0$ , we have  $T(n) \leq c \cdot f(n)$

“order  $f(n)$ ”

$c$  cannot depend on  $n$

sufficiently large  $n$

$T(n)$  is bounded above by a constant multiple of  $f(n)$

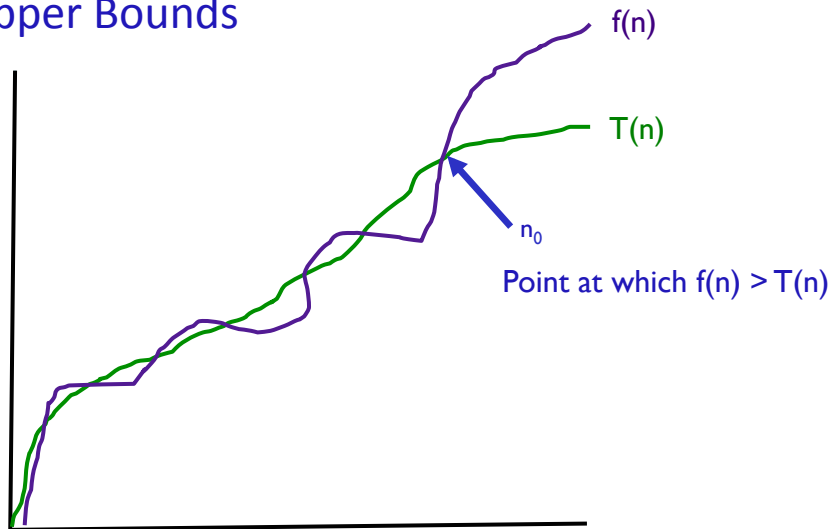

→  $T$  is **asymptotically upperbounded** by  $f$

Jan 17, 2018

Sprenkle - CSCI211

3

## Review: Asymptotic Order of Growth: Upper Bounds

**Asymptotic:** what happens as input size grows to infinity

Jan 17, 2018

Sprenkle - CSCI211

4

## Review: Upper Bounds Example

- $T(n) = pn^2 + qn + r$ 
  - $p, q, r$  are positive constants
- For all  $n \geq 1$ ,

$$\begin{aligned} T(n) &= pn^2 + qn + r \\ &\leq pn^2 + qn^2 + rn^2 \\ &= (p+q+r) n^2 \\ &= c n^2 \end{aligned}$$

- ➔  $T(n) \leq cn^2$ , where  $c = p+q+r$
- ➔  $T(n) \in O(n^2)$
- Also correct to say that  $T(n) \in O(n^3)$

Jan 17, 2018

Sprenkle - CSCI211

5

## Review: Asymptotic Order of Growth: Lower Bounds

- Complementary to upper bound

- $T(n)$  is  $\Omega(f(n))$  if there exist constants  $\varepsilon > 0$  and

$\varepsilon$  cannot depend on  $n$

sufficiently large  $n$

$n_0 \geq 0$  such that for all  $n \geq n_0$ , we have

$$T(n) \geq \varepsilon \cdot f(n)$$

$T(n)$  is bounded below by a constant multiple of  $f(n)$

➔  $T$  is **asymptotically lowerbounded** by  $f$

Jan 17, 2018

Sprenkle - CSCI211

6

## Example: Lower Bound

- $T(n) = pn^2 + qn + r$ 
  - $p, q, r$  are positive constants
- Idea: *Deflate* terms rather than inflate

Jan 17, 2018

Sprenkle - CSCI211

7

## Example: Lower Bound

- $T(n) = pn^2 + qn + r$ 
  - $p, q, r$  are positive constants
- Idea: *Deflate* terms rather than inflate
- For all  $n \geq 0$ ,

$$T(n) = pn^2 + qn + r \geq pn^2$$

$$\rightarrow T(n) \geq \varepsilon n^2, \text{ where } \varepsilon = p > 0$$

$$\rightarrow T(n) \in \Omega(n^2)$$

- Also correct to say that  $T(n) \in \Omega(n)$

Jan 17, 2018

Sprenkle - CSCI211

8

## Tight bounds

$T(n)$  is  $\Theta(f(n))$  if  $T(n)$  is both  $O(f(n))$  and  $\Omega(f(n))$

➤ The “right” bound

Jan 17, 2018

Sprenkle - CSCI211

9

## Property: Transitivity

How is this property helpful to us when analyzing algorithm runtimes?

- If  $f = O(g)$  and  $g = O(h)$ , then  $f = O(h)$
- If  $f = \Omega(g)$  and  $g = \Omega(h)$ , then  $f = \Omega(h)$
- If  $f = \Theta(g)$  and  $g = \Theta(h)$ , then  $f = \Theta(h)$

Proofs in book

Jan 17, 2018

Sprenkle - CSCI211

10

## Applying Transitivity Property in Algorithm Analysis

Transitivity property: If  $f = O(g)$  and  $g = O(h)$ , then  $f = O(h)$

Jan 17, 2018

Sprenkle - CSCI211

11

## Property: Additivity

How is this property helpful to us when analyzing algorithm runtimes?

- If  $f = O(h)$  and  $g = O(h)$ , then  $f + g = O(h)$
- If  $f = \Omega(h)$  and  $g = \Omega(h)$ , then  $f + g = \Omega(h)$
- If  $f = \Theta(h)$  and  $g = \Theta(h)$ , then  $f + g = \Theta(h)$

Proofs in book

### Sketch proof for $O$ :

By defn,  $f \leq c \cdot h$

By defn,  $g \leq d \cdot h$

$f + g \leq c \cdot h + d \cdot h = (c + d) h = c' \cdot h$

$\rightarrow f + g$  is  $O(h)$

Jan 17, 2018

Sprenkle - CSCI211

12

## Applying Additivity Property in Algorithm Analysis

Additivity property:  
If  $f = O(h)$  and  $g = O(h)$ , then  $f + g = O(h)$

Jan 17, 2018

Sprenkle - CSCI211

13

## Practice: Asymptotic Order of Growth

What are the upper bounds, lower bounds, and tight bound on  $T(n)$ ?

- $T(n) = 32n^3 + 17n + 32$

Jan 17, 2018

Sprenkle - CSCI211

14

## Practice: Asymptotic Order of Growth

- $T(n) = 32n^3 + 17n + 32$ 
  - $T(n) \in$ 
    - $O(n^3), O(n^4)$
    - $\Omega(n^3), \Omega(n)$
    - $\Theta(n^3)$
  - $T(n)$  is not  $O(n), \Omega(n^4), \Theta(n),$  or  $\Theta(n^2)$

Jan 17, 2018

Sprenkle - CSCI211

15

## ASYMPTOTIC BOUNDS FOR CLASSES OF ALGORITHMS

Jan 17, 2018

Sprenkle - CSCI211

16

## Asymptotic Bounds for Polynomials

- $a_0 + a_1n + \dots + a_d n^d \in \Theta(n^d)$  if  $a_d > 0$

→ Runtime determined by highest-order term

- **Polynomial time.** Running time is  $O(n^d)$  for some constant  $d$  that is independent of the input size  $n$
- Other examples of polynomial times:
  - $O(n^{1/2})$
  - $O(n^{1.58})$
  - $O(n \log n) \leq O(n^2)$

Jan 17, 2018

Sprenkle - CSCI211

17

## Asymptotic Bounds for Logarithms

- **Logarithms.**  $\log_b n = x$ , where  $b^x = n$ 
  - Approximate: To represent  $n$  in base- $b$ , need  $x+1$  digits

N	b	x
100	10	
1000	10	
100	2	
1000	2	

Jan 17, 2018

Sprenkle - CSCI211

18

## Asymptotic Bounds for Logarithms

- **Logarithms.**  $\log_b n = x$ , where  $b^x = n$

➤ Approximate: To represent  $n$  in base- $b$ , need  $x+1$  digits

N	b	x
100	10	2
1000	10	3
100	2	6.64
1000	2	9.92

Describe the running time of an  $O(\log n)$  algorithm as the input size grows. Compare with polynomials.

Jan 17, 2018

Sprenkle - CSCI211

19

## Asymptotic Bounds for Logarithms

- **Logarithms.**  $\log_b n = x$ , where  $b^x = n$

➤  $x$  is number of digits to represent  $n$  in base- $b$  representation

Jan 17,

20

## Asymptotic Bounds for Logarithms

- **Logarithms.**  $\log_b n = x$ , where  $b^x = n$

→ Slowly growing functions

- Identity:  $\log_a n = \log_b n / \log_b a$

➤ Means that

$$\log_a n = 1/\log_b a * \log_b n$$

**Constant!**

- $O(\log_a n) = O(\log_b n)$   
for any constants  $a, b > 0$

Jan 17, 2018

Sprenkle - CSCI211

21

## Asymptotic Bounds for Logarithms

- **Logarithms.**  $\log_b n = x$ , where  $b^x = n$

→ Slowly growing functions

- $O(\log_a n) = O(\log_b n)$  for any constants  $a, b > 0$

→ Don't need to specify the base

- For every  $x > 0$ ,  $\log n = O(n^x)$

→ Log grows slower than every polynomial

Jan 17, 2018

Sprenkle - CSCI211

22

## Asymptotic Bounds for Exponentials

- **Exponentials:** functions of the form  $f(n) = r^n$  for constant base  $r$ 
  - Faster growth rates as  $n$  increases
- For every  $r > 1$  and every  $d > 0$ ,  $n^d = O(r^n)$ 
  - ➔ Every exponential grows faster than every polynomial

Jan 17, 2018

Sprenkle - CSCI211

23

## Summary of Asymptotic Bounds

- In terms of growth rates ....
  - Logarithms < Polynomials < Exponentials
- Practice comparing functions on next problem set
  - See Chapter 2 solved exercise

Jan 17, 2018

Sprenkle - CSCI211

24

## Review: Our Process

1. Understand/identify problem
  - Simplify as appropriate
2. Design a solution
3. Analyze
  - Correctness, efficiency
  - May need to go back to step 2 and try again
4. Implement 
  - Within bounds shown in analysis

Jan 17, 2018

Sprenkle - CSCI211

25

## IMPLEMENTING GALE-SHAPLEY ALGORITHM

Jan 17, 2018

Sprenkle - CSCI211

26

## Review: Gale-Shapley Stable Matching Algorithm

```
Initialize each person to be free
while (some man is free and hasn't proposed to every woman)
  Choose such a man m
  w = 1st woman on m's list to whom m has not yet proposed
  if (w is free)
    assign m and w to be engaged
  else if (w prefers m to her fiancé m')
    assign m and w to be engaged and m' to be free
  else
    w rejects m
```

27

## How Can We Implement The Algorithm Efficiently?

- What is our goal for the implementation's runtime?
- What do we need to model?
- How should we represent them?

Jan 17, 2018

Sprenkle - CSCI211

28

## How Can We Implement The Algorithm Efficiently?

- What is our goal for the implementation's runtime?
  - $O(N^2)$
- What do we need to model?
- How should we represent them?

Jan 17, 2018

Sprenkle - CSCI211

29

## Stable Matching Implementation

- What do we need to represent?
- How should we represent them?

Data	How represented
Men, Women	
Preference lists	
Unmatched men	
Who men proposed to	
Engagements	

What's the difference between an array and a list?

Jan 17, 2018

Sprenkle - CSCI211
