

Objectives

- Data structure: Heaps
- Implementing a Priority Queue

Review: Summary of Running Times

Running Time	Example
$O(\log n)$	
$O(n)$	
$O(n \log n)$	
$O(n^2)$	
$O(n!)$	

Common runtimes: Chapter 2.4

Review: Summary of Running Times

Running Time	Example
$O(\log n)$	Dividing problem in half on each iteration
$O(n)$	Operate constant amount on each input value
$O(n \log n)$	Divide and conquer
$O(n^2)$	Operate on each pair of inputs
$O(n!)$	Operate on each permutation of inputs

3

Using a Priority Queue

- Given API:
 - Add an element with a given key (i.e., priority)
 - Delete an element with a given priority
 - Select element with smallest key/highest priority
 - Get the number of elements in PQ

How could we use a PQ to sort a list of numbers?

Brief Overview

This course introduces the concepts, tools, and techniques used in software development. Topics include

- the software life cycle
- advanced concepts of object-oriented analysis and design
- APIs and program documentation
- systematic testing
- design patterns
- the use of the Unified Modeling Language
- refactoring code during maintenance
- extreme programming, pair programming, and rapid prototyping
- event-driven programming and graphical user interfaces
- multithreading

Java™ Platform, Standard Edition 8 API Specification

This document is the API specification for the Java™ Platform, Standard Edition.

Priority Queues for Sorting

1. Add elements into PQ with the number's value as its priority
2. Then extract the smallest number *until* done
 - Come out in sorted order

Sorting n numbers takes $O(n \log n)$ time

What is the goal running time for our PQ's operations? **$O(\log n)$**

Already know our "loops" will be $O(n)$

Implementing a Priority Queue

- Consider an *unordered* list, where there is a pointer to minimum

- How difficult (i.e., expensive) is
 - Adding new elements?
 - Extraction?

Jan 24, 2018

Sprenkle - CSCI211

7

Implementing a Priority Queue

- Consider an *unordered* list, where there is a pointer to minimum

- How difficult (i.e., expensive) is
 - Adding new elements? *easy* ($O(1)$)
 - Extraction? *difficult*
 - Need to find “new” minimum: $O(n)$

What is the running time for sorting using the PQ in this case?

$O(n^2)$

Jan 24, 2018

Sprenkle - CSCI211

8

Implementing a Priority Queue?

- Consider a *sorted* list where min is at the beginning

- Should you use an array or linked list?
- How difficult is
 - Adding new elements?
 - Extraction?

9

Implementing a Priority Queue

- Consider a sorted list where min is at the beginning

- Should you use an array or linked list?
- How difficult is
 - Adding new elements? *difficult (insertion)*
 - Extraction? *Easy*

What is the running time for sorting using the PQ in this case?

$O(n^2)$

10

Comparing Data Structures

Operation	Unsorted Array	Sorted List
Start(N)		
Insert(v)		
FindMin()		
Delete(i)		
ExtractMin()		

Jan 24, 2018

Sprenkle - CSCI211

11

Comparing Data Structures

Operation	Unsorted Array	Sorted List
Start(N)	$O(1)$	$O(1)$
Insert(v)	$O(1)$	$O(n)$
FindMin()	$O(1)$	$O(1)$
Delete(i)	$O(n)$	$O(1)$
ExtractMin()	$O(n)$	$O(1)$

Assuming deleting the first element.
If deleting another element, $O(i)$

12

Reflection

- All of “known” data structures has one operation that takes $O(n)$ time
- Cannot implement PQs with “known” data structures arrays and lists to meet desired $O(n \log n)$ runtime

 Motivates use of a new data structure (*heap*) to implement PQ

13

HEAPS

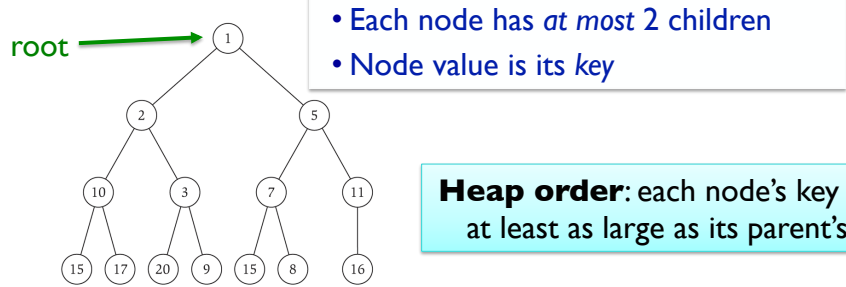

Jan 24, 2018

Sprenkle - CSCI211

14

Heap Defined

- Combines benefits of sorted array and list
- Balanced binary tree

Note: **not** a binary search tree

Heaps

Implementing a Heap

- Option 1: Use pointers
 - Each node keeps
 - Element it stores (key)
 - 3 pointers: 2 children, parent
- Option 2: No pointers
 - Requires knowing upper bound on n
 - For node at position i
 - left child is at $2i$
 - right child is at $2i+1$

Where does the index in the array start?
If know child's position, what is the position of parent?

17

Implementing a Heap: Operations

- Finding the minimal element?

Implementing a Heap: Operations

- Finding the minimal element
 - First element
 - $O(1)$

Jan 24, 2018

Sprenkle - CSCI211

19

Implementing a Heap: Operations

- Adding an element?
 - Assume heap has less than N elements

Jan 24, 2018

Sprenkle - CSCI211

20

Implementing a Heap: Operations

- Adding an element?
 - Could add element to last position
 - What are possible scenarios?

Jan 24, 2018

Sprenkle - CSCI211

21

Implementing a Heap: Operations

- Adding an element?
 - Could add element to last position
 - What are possible scenarios?
 - Heap is no longer balanced
 - Something that is almost a heap but a little off
 - Need **Heapify-up** procedure to fix our heap

Jan 24, 2018

Sprenkle - CSCI211

22

Heapify-Up

Heap Position where node added

```

Heapify-up(H, i):
  if i > 1 then
    j=parent(i)=floor(i/2)
    if key[H[i]] < key[H[j]] then
      swap array entries H[i] and H[j]
      Heapify-up(H, j)
  
```

- Why does this algorithm work?
- What is the intuition?
